and its resolution and the interventions used are presented This book provides evidence where it exists for the specific interventions and an extensive illustration program depicts the various reactions and their response to treatment protocols Skin Care in Radiation Oncology A Practical Guide presents a framework for patient care in an era of advancing technology and systemic and targeted therapies and is a valuable resource for radiation oncologists dermatologists and residents

Sakuma,2012-12-06 If the early stages of a disease begin with the involvement of a small area of cells or tissue the early

diagnosis of pathologic changes by means of radio graphy should concentrate first on the detection of such minute changes The ideal solution would be to produce X ray images of findings much finer than those observable by the naked eye and herein lies a new field of research that is believed to be worth developing The introduction of a 0.3 mm focal spot rotating anode tube about 25 years ago opened the way to the clinical application of magnification radiography Due to the postwar economic situation we were unable to import this type of X ray tube but we believed in the importance of magnification radiography in X ray diagnosis and in 1952 we produced an X ray tube with a 0.15 mm focal spot by reconstructing an existing fixed anode tube This X ray tube has been improved step by step so that tubes with focal spots of 0.1 mm or 0.05 mm are now available in Japan Thus it has become possible to obtain 4 to 6 x magnification images of minute lesions that could not be imaged by normal roentgenography
