Ecological Management of Agricultural Weeds Matt Liebman,Charles L. Mohler,Charles P. Staver,2001-07-19 Concerns over environmental and human health impacts of conventional weed management practices herbicide resistance in weeds and rising costs of crop production and protection have led agricultural producers and scientists in many countries to seek strategies that take greater advantage of ecological processes and thereby allow a reduction in herbicide use This book provides principles and practices for ecologically based weed management in a wide range of temperate and tropical farming systems After examining weed life histories and processes determining the assembly of weed communities the authors describe how tillage and cultivation practices manipulations of soil conditions competitive cultivars crop diversification grazing livestock arthropod and microbial biocontrol agents and other factors can be used to reduce weed germination growth competitive ability reproduction and dispersal Special attention is given to the evolutionary challenges that weeds pose and the roles that farmers can play in the development of new weed management strategies

Agroecological Economics Paul Wojtkowski,2010-07-28 Agroecology is the science of applying ecological concepts and principles to the design development and management of sustainable agricultural systems Agroecological economics a subsection of agricultural economics evaluates the ecological consequences of agricultural methods on the economic scale Agroecological economics considers green engineering as a means of measurement As the environmental movement unfolds the importance of biodiversity and long term sustainability are indisputable Progress depends on determining the economic viability of terrestrial agroecosystems What is lacking is the analysis needed to bring biodiverse and sustainable systems to fruition Agroecological Economics analyzes the current topics that must be addressed in order to provide sustainable agricultural systems It explains the economics of land use ecology with emphasis on changing over from a conventional model of agriculture to environmentally and ecologically friendly models and the financial incentives that are important to these practices Analyzes agricultural solutions with economic testing Includes a complete analysis of recent biodiversity based research with valuable new economic methodologies Provides various applications to mitigate the problems which have economic and ecological effects on agroecosystems Offers applications of ecologically sound land use practices in production and manufacturing
