This volume is dedicated to the faith that the future will offer hard quantitative measures of the human thought process and affect emotional system The symposium from which this volume issues was an opportunity for us to invite a number of our friends to help in collecting some of the current contributions to this belief The participants and topics weave a mosaic of the future The selection was made in an attempt to project into the future what is most important in the present and in the relatively recent past in terms of generating hard data of the elusive cognitive affect systems We regret because of editorial constraints that we have not been able to include some of the outstanding contributions offered by our various chairmen In particular we are sorry that this volume does not reflect the thoughts of Robert Williams R J Ellingson William Fields and especially those of our esteemed grand marshal W Grey Walter This volume deals initially with the electroencephalographic measurement of sleep profiles as such profiles may be used to measure the stresses of special environments and special patient populations Of particular interest is the correlation of sleep profiles with basic endocrine functions We expect the measurement of sleep profiles to become more of a routine clinical examination in the next few years as our understanding of this fascinating state of consciousness increases in terms of how it is influenced by real life stresses and disease processes
Mapping the Darkness Kenneth Miller,2023-10-05 Fascinating magisterially researched and brilliantly written Steve Silberman author of *Neurotribes* Thirty two days underground No heat No sunlight 4 June 1938 Nathaniel Kleitman and his

research student make their way down the seventy one steps leading to the mouth of Mammoth Cave They are about to embark on one of the most intrepid and bizarre experiments in medical history one which will change our understanding of sleep forever Undisturbed by natural light they will investigate what happens when you overturn one of the fundamental rhythms of the human body Together they enter the darkness When Kleitman first arrived in New York a penniless twenty year old refugee few would have guessed that in just a few decades he would revolutionise the field of sleep science In Mapping the Darkness Kenneth Miller weaves science and history to tell the story of the outsider scientists who took sleep science from the fringes to a mainstream obsession Reliving the spectacular experiments technological innovation imaginative leaps and single minded commitment of these early pioneers Miller provides a tantalising glimpse into the most mysterious third of our lives
