 problem of present day research workers especially in the life sciences is the plethora of publications of all kinds abstracts  
 short communications full papers in journals of varying quality reviews and proceedings of symposia with in addition an  
 unprecedented duplication of publications Even for experts working in the field it is almost impossible to keep an up to date  
 view of all current research articles The Western grant and career system encourages scientists to publish as much as  
 possible The editors and publishers of our new series are convinced that the format of Current Topics in Neuroendocrinology  
 leads a way out of this confusion Each volume is conceived as a concise up to date textbook on one well defined and currently  
 exciting subject Different from classic textbooks however the speed of publication compares favorably with that of many  
 journals this ensures an immediacy which is im possible in textbooks On the other hand topics to be included in this series  
 are also sufficiently reliable with enough work being done to treat them from several aspects Each volume will supply four to

six chapters treating such a broad topic as neuroendocrinology from several points of view for example anatomic electrophysiologic endocrine and behavioral views Where clinical data are immediately available they will be included No other 360 pages treating the nervous or endocrine systems provides such a coordinated set of chapters on an interesting topic in each volume *Biology of Sleep Substances* Shojiro Inoue, 2020-08-11 All aspects of sleep sciences are included in this excellent resource text with special reference to sleep substances and sleep modulators The historical development of the theories of sleep are reviewed in conjunction with the technical problems All candidate substances are overviewed as to their sites of presence chemical nature bioassay techniques physiological and pharmacological effects On the basis of a standardized methodology developed by the author sleep modulatory characteristics of some substances are compared and evaluated in quantitative terms The sleep regulatory mechanisms which are composed of complex neurohumoral subsystems are analyzed from the results of recent neurophysiological and neuroendocrinological experiments Furthermore an evolutionary aspect of sleep substances is taken into consideration Chapters Highlight Techniques for isolation and evaluation Prostaglandins Paradoxical sleep factors Sleep promoting substances and nucleosides **Encyclopedia of Basic Epilepsy Research**, 2009-05-27 As a truly translational area of biomedical investigation epilepsy research spans an extraordinary breadth of subjects and involves virtually every tool that modern neuroscience has at its disposal The Encyclopedia of Basic Epilepsy Research provides an up to date comprehensive reference for all epilepsy researchers With an expert list of authors the encyclopedia covers the full spectrum of research activities from genes and molecules to animal models and human patients The encyclopedia's electronic format also provides unparalleled access to frequent updates and additions while the limited edition print version provides another option for owning this content The Encyclopedia of Basic Epilepsy Research is an essential resource for researchers of all levels and clinicians who study epilepsy The only comprehensive reference for basic research and current activities in epilepsy Electronic format provides fast and easy access to updates and additions with limited print version available as well Contains over 85 articles all written by experts in epilepsy research **Cyberphysical Systems for Epilepsy and Related Brain Disorders** Nikolaos S. Voros, Christos P. Antonopoulos, 2015-06-30 This book introduces a new cyberphysical system that combines clinical and basic neuroscience research with advanced data analysis and medical management tools for developing novel applications for the management of epilepsy The authors describe the algorithms and architectures needed to provide ambulatory diagnostic and long term monitoring services through multi parametric data collection Readers will see how to achieve in hospital quality standards addressing conventional routine clinic based service purposes at reduced cost enhanced capability and increased geographical availability The cyberphysical system described in this book is flexible can be optimized for each patient and is demonstrated in several case studies **Biomedical Index to PHS-supported Research**, 1988 **NIDA Research Monograph**, 1976 Aminergic Hypotheses of Behavior, Reality Or Cliche?
