The Naval Flank of the Western Front Mark Karau, 2015-02-10 Belgium was once described as the dagger held at the throat of England a collection of provinces that had long been a critical factor in British foreign policy and the traditional concern was that Belgium and especially the Flanders coast would fall into the hands of the strongest continental power In 1914 Germany's occupation of Belgium brought about the spectre of enemy ships only seventy miles from the British coast and the coast of Flanders became effectively the naval flank of the Western Front Admiral Alfred von Tirpitz was one of the few within the German navy who recognised the strategic potential of the three ports of Ostend

Zeebrugge and Bruges that they were closer to England than the Helgoland Bight for access by small craft and brought Germany to within a few hours sailing of the Thames estuary This new book tells the story of the creation purpose operations and career of the MarineKorps Flandern The Flanders harbours should have allowed the German navy to strike dangerous blows at vital British traffic in the Channel and southern North Sea but the MarineKorps was unable to fulfill the great expectations of von Tirpitz The author not only explains how the German conducted operations but also explains how the opportunities presented by the Flemish occupation were wasted away A significant and insightful book on an important theatre of the War

Weapons of Desperation Lawrence Paterson, 2018-03-30 As the Third Reich headed for destruction German ingenuity in the naval field turned to unconventional weapons midget submarines radio controlled explosive boats and various forms of underwater sabotage This is one of the last unchronicled areas of World War II naval history and this well known author describes how facing overwhelming odds German sailors most of them volunteers mounted attacks that were little better than suicide missions Judged by their effect on the Allied advance their successes were slight but there seems to have been no collapse of morale and the indomitable bravery of those involved makes riveting reading Pieced together from fragmentary sources this largely untold story uncovers some of the most desperate operations of the War

British Coastal Forces Norman Friedman, 2023-04-30 The Royal Navy invented the fast motor torpedo boat during the First World War and used it and other small coastal craft to great effect during the Second This book tells the dramatic story of British coastal forces both offensive and defensive in both World Wars and beyond In the Second World War British coastal forces fought a desperate battle to control the narrow seas particularly the Channel and the North Sea and took the war to the coasts of German occupied Europe fighting where larger warships could not be risked They also made a significant contribution to victory in the Mediterranean but it was primarily warfare in home waters that shaped wartime British Coastal Forces and left lessons for postwar development In this book Norman Friedman uniquely connects the technical story of the coastal craft and their weapons and other innovations with the way they fought In both world wars much of the technology was at the edge of what was feasible at the time Boats incorporated considerable British innovation and also benefited from important US contributions particularly in supplying high powered engines during World War II In contrast with larger warships British coastal forces craft were essentially shaped by a few builders and their part in the story is given full credit They also built a large number of broadly similar craft for air sea rescue and for completeness these are described in an appendix This fascinating dramatic story is also relevant to modern naval thinkers concerned with gaining or denying access to hostile shores The technology has changed but the underlying realities have not This book includes an extensive account of how

coastal forces supported the biggest European example of seizing a defended shore the Normandy invasion That was by far the largest single British coastal forces operation demanding a wide range of innovations to make it possible Like other books in this series this one is based very heavily on contemporary official material much of which has not been used previously like the extensive reports of US naval observers who were allowed wide access to the Royal Navy as early as 1940 Combined with published memoirs these sources offer a much more complete picture than has previously appeared of how Coastal Forces fought and of the way in which various pressures both operational and industrial shaped them **United States Naval**

Institute Proceedings United States Naval Institute,1922 Wielding the Dagger Mark D. Karau,2003-10-30 In August 1914 Admiral Alfred von Tirpitz convinced the German armed forces to create a new unit called the MarineDivision Flandern to garrison the Belgian coastline and prepare naval bases in for the implementation of a naval guerrilla war against Great Britain The Germans called their strategy Kleinkrieg or little war and they intended to whittle away at British naval superiority by using their submarines and destroyers Later expanded into the MarineKorps the unit soon found itself in the middle of a land war as well What had been intended as a garrison unit found itself on the frontlines when the war stalemated The British had traditionally seen Belgium as a dagger pointed at the throat of England and the Royal Navy feared what use the Germans might make of the position The result was an active naval campaign in the English Channel Karau brings to light the contributions of the MarineKorps Flandern a force often neglected by historians He examines the role of the MarineKorps in both land and naval wars and reaffirms the increasingly important role played by aircraft in the Flanders theater If Belgium was a weapon pointed at the British throat were the Germans properly equipped to wield the dagger *Bureau of Ships Journal* ,1953 **Bureau of Ships Journal** United States.
