Smaller Satellites: Bigger Business? Michael J Rycroft, Norma Crosby, 2013-06-29 Y Fujimori Symposium Programme Committee Chair and Faculty Member International Space University e mail fujimori isu isunet edu M Rycroft Faculty Member International Space University e mail rycroft isu isunet edu N Crosby International Space University e mail norma bock crosby fsbusines co uk For the sixth annual ISU Symposium the theme was Smaller Satellites Bigger Business Concepts Applications and Markets for Micro Nanosatellites in a New Information World Thus the Symposium addressed the crucial question are small satellites the saviour of space programmes around the world It did this from the unique perspective of the International Space today University the interdisciplinary international and intercultural perspective This Symposium brought together a variety of people working on small satellites engineers scientists planners providers operators policy makers and business executives together with representatives from regulatory bodies from national and international organizations and from the finance sector and also entrepreneurs Discussion and debate were encouraged based on the papers presented and those published here

The Role of Small Satellites in NASA and NOAA Earth Observation Programs National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Space Studies Board, Committee on Earth Studies, 2000-05-12 Remote observations of Earth from space serve an extraordinarily broad range of purposes resulting in extraordinary demands on those at the National Aeronautics and Space Administration NASA the National Oceanic and Atmospheric Administration NOAA and elsewhere who must decide how to execute them In research Earth observations promise large volumes of data to a variety of disciplines with differing needs for measurement type simultaneity continuity and long term instrument stability Operational needs such as weather forecasting add a distinct set of requirements for continual and highly reliable monitoring of global conditions The Role of Small Satellites in NASA and NOAA Earth Observation Programs confronts these diverse requirements and assesses how they might be met by small satellites In the past the preferred architecture for most NASA and NOAA missions was a single large spacecraft platform containing a sophisticated suite of instruments But the recognition in other areas of space research that cost effectiveness flexibility and robustness may be enhanced by using small spacecraft has raised questions about this philosophy of Earth observation For example NASA has already abandoned its original plan for a follow on series of major platforms in its Earth Observing System This study finds that small spacecraft can play an important role in Earth observation programs providing to this field some of the expected benefits that are normally associated with such programs such as rapid development and lower individual mission cost It also identifies some of the programmatic and technical challenges associated with a mission composed of small spacecraft as well as reasons why more traditional larger platforms might still be preferred The reasonable conclusion is that a systems level examination is required to determine the optimum architecture for a given scientific and or operational objective The implied new challenge is for NASA and NOAA to find intra and interagency

planning mechanisms that can achieve the most appropriate and cost effective balance among their various requirements

Small Satellites Irmgard Marboe, 2016-03-11 *Small Satellites Regulatory Challenges and Chances* edited by Irmgard Marboe addresses the booming phenomenon of small satellites The rapid innovation of technology has made it possible to develop launch and operate small satellites at rather low costs Universities start ups and also governments see the chance to access outer space more easily and inexpensively Yet the importance to comply with existing rules and regulations that are in place to ensure that outer space is used and explored in a safe and responsible manner is sometimes overlooked The book addresses this challenge and shows how it can be met The contributors are renowned academics and practitioners from many different countries that share their experiences and insights and suggest practical solutions Remote Sensing Mr. Rohit Manglik, 2024-05-13 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels

Smaller Satellites Operations Near Geostationary Orbit Matthew T. Erdner, 2009 With the ongoing miniaturisation of components the utility of smaller satellites is increasing Many believe in the near future that small satellites will be able to perform all functions that larger satellites currently perform today It has been suggested that these satellites will be less expensive thus offer a lower risk to the consumer in case they fail before their mission design life This book looks at the ability to build and operate smaller satellites with current technology to perform covert Space Control and Space Situational Awareness missions near geostationary orbit The investigation determined if space qualified Commercial Off The Shelf COTS components and current technology could be used to build covert smaller satellites The largest satellite was sized to be undetectable from earth based sensors Subsequent CubeSat sizes were selected to determine how small a satellite could be built with COTS components and current technology to perform the assigned missions A comparative analysis was then performed to determine how these satellites could be cost effectively launched to orbit A cost estimate was performed to determine the entire life cycle cost for each satellite size excluding launch and integration segments Using that information the best satellite size was determined **Astronomy** Edmund Neison, 1886 *Small Satellites and Their Regulation* Ram S. Jakhu, Joseph N. Pelton, 2013-11-19 Since the launch of UoSAT 1 of the University of Surrey United Kingdom in 1981 small satellites proved regularly to be useful beneficial and cost effective tools Typical tasks cover education and workforce development technology demonstration verification and validation scientific and engineering research as well as commercial applications Today the launch masses range over almost three orders of magnitude starting at less than a kilogram up to a few hundred kilograms with budgets of less than US 100 00 and up to millions within very short timeframes of sometimes less than two years Therefore each category of small satellites provides specific challenges in design development and operations Small satellites offer great potentials to gain responsive low cost access to space within a short timeframe for

institutions companies regions and countries beyond the traditional big players in the space arena For these reasons particularly the low cost of construction launch and operation small micro cube or nano satellites are being preferred by students and educational institutions amateur radio operators small and developing countries international aid agencies and most recently by defense agencies and satellite operators who are examining deployment of constellation clusters instead of conventional application satellites In some cases these new capabilities are being deployed as hosted payloads on larger satellites The advent of hosted payloads as a significant part of the satellite industry represents a key new topic that this book will address The number of small satellites of various types is increasing fast as their benefits are being realized This short and unique interdisciplinary book covering both technical and regulatory aspects examines all the different types of applications and reasons for small as well as exploring technical and operational innovations that are being introduced It also examines the new technical standards removal techniques or other methods that might help to address current problems and the regulatory issues and procedures to ameliorate problems associated with small satellites especially mounting levels of orbital debris and noncompliance with radio frequency and national licensing requirements liabilities export controls and so on
