**Scientific and Technical Aerospace Reports** ,1993 **Smart Antennas** Lal Chand Godara, 2004-01-27 The use of smart antennas to increase mobile communications channels has re ignited research and development in the field Practicing engineers are eager to discover more about this subject and need a comprehensive book that can provide a learning platform and prevent the loss of time spent on searches through journal literature Smart Antennas examines nearly all aspects of

array signal processing and presents them in a logical manner. It delivers a detailed treatment of antenna array processing schemes, adaptive algorithms to adjust weighting, direction of arrival (DOA) estimation methods, diversity combining methods that combat fading and reduce errors. The book introduces the various processor structures suitable for the narrowband field, examining the behavior of both element space and beamspace processors. It then explores adaptive processing focusing on the simple matrix inversion algorithm, constrained least mean squares (LMS), the neural network approach, and more. The text also describes smart antennas that are suitable for broadband signals and presents analyses and techniques suitable for correlated fields in narrowband and broadband signals. This volume supplements its content with extensive references enabling you to further investigate smart antenna array schemes and applications.

*Smart Antennas* T. K. Sarkar, Michael C. Wicks, Magdalena Salazar-Palma, Robert J. Bonneau, 2005-02-18. A valuable addition to the Wiley Series in Microwave and Optical Engineering. Today's modern wireless mobile communications depend on adaptive smart antennas to provide maximum range and clarity. With the recent explosive growth of wireless applications, smart antenna technology has achieved widespread commercial and military applications. The only book available on the topic of adaptive antennas using digital technology, this text reflects the latest developments in smart antenna technology and offers timely information on fundamentals as well as new adaptive techniques developed by the authors. Coupling electromagnetic aspects of antenna design with signal processing techniques designed to promote accurate and efficient information exchange, the text presents various mechanisms for characterizing signal path loss associated with signal propagation, particularly for mobile wireless communications systems based on such techniques as joint space frequency adaptive processing. In clear, accessible language, the authors explain the difference between adaptive antennas and adaptive signal processing. Illustrate the procedures for adaptive processing using directive elements in a conformal array, clarify multistage analysis procedure which combines electromagnetic analysis with signal processing, present a survey of the various models for characterizing radio wave propagation in urban and rural environments, describe a method wherein it is possible to identify and eliminate multipath without spatial diversity, optimize the location of base stations in a complex environment. The text is an excellent resource for researchers and engineers working in electromagnetics and signal processing who deal with performance improvement of adaptive techniques as well as those who are concerned with the characterization of propagation channels and applications of airborne phased arrays.
