Laura Wirth,2022-10-13 The main objective of this work is to represent the behaviors of weighted automata by expressively equivalent formalisms rational operations on formal power series linear representations by means of matrices and weighted monadic second order logic First we exhibit the classical results of Kleene B chi Elgot and Trakhtenbrot which concentrate on the expressive power of finite automata We further derive a generalization of the B chi Elgot Trakhtenbrot Theorem addressing formulas whereas the original statement concerns only sentences Then we use the language theoretic methods as starting point for our investigations regarding power series We establish Sch tzenberger s extension of Kleene s Theorem referred to as Kleene Sch tzenberger Theorem Moreover we introduce a weighted version of monadic second order logic which is due to Droste and Gastin By means of this weighted logic we derive an extension of the B chi Elgot Trakhtenbrot Theorem Thus we point out relations among the different specification approaches for formal power series Further we relate the notions and results concerning power series to their counterparts in Language Theory Overall our investigations shed light on the interplay between languages formal power series automata and monadic second order logic
