Management of Amphibians, Reptiles, and Small Mammals in North America Robert C. Szaro, Kieth E. Severson, David R. Patton, 1988 Historically the management of public lands from a multiple use perspective has led to a system that emphasizes those habitat components or faunal elements that primarily resulted in some sort of definable economic value While this often benefitted other species that were not even considered in the original prescriptions it also negatively impacted others We no longer can afford to take this simplistic view of ecosystem management We need to use a more holistic approach where ecological landscapes are considered as units and land management practices incorporate all elements into an integrated policy This includes examining the impacts of proposed land uses on amphibian reptile and small mammal populations Bulletin of the Kyoto Gakugei University ,1951 **Current Herpetology in East Asia** Masafumi Matsui, Tsutomu Hikida, Richard C. Goris, 1989 **Alien Reptiles and Amphibians** Fred Kraus, 2008-12-19 Transportation of species to areas outside their native ranges has been a feature of human culture for millennia During this time such activities have largely been viewed as beneficial or inconsequential However it has become increasingly clear that human caused introductions of alien biota are an ecological disruption whose consequences rival those of better known insults like chemical pollution habitat loss and climate change Indeed the irreversible nature of most alien species introductions makes them less prone to correction than many other ecological problems Current reshuffling of species ranges is so great that the present era has been referred to by some as the Homogocene in an effort to reflect the unique magnitude of the changes being made These alien interlopers often cause considerable ecological and economic damage where introduced Species extinctions food web disruptions community alterations ecosystem conversion changes in nutrient cycling fisheries collapse watershed degradation agricultural loss building damage and disease epidemics are among the destructive and frequently unpredictable ecological and economic effects that invasive alien species can inflict The magnitude of these damages continues to grow with virtually all environments heavily used by humans now dominated by alien species and many natural areas becoming increasingly prone to alien invasion as well Attention to this problem has increased in the past decade or so and efforts to prevent or limit further harm are gaining wider scientific and political acceptance **The Snake** ,1985 General Technical Report RM. ,1988 Labour Contracts and Labour Relations in Early Modern Central Japan Mary Louise Nagata, 2004-11-23 Based on a collection of labour contracts and other documents this book examines the legal economic and social relations of labour as they developed in the commercial enterprises of Tokugawa Japan The urban focus is Kyoto the cultural capital and smallest of the three great cities of the Tokugawa period but the data comes from a wider region of commercial and castle towns and rural villages in central Japan **Israel Journal of Zoology** ,1996 **Snakes** Harry W.
