**Ecosystem Dynamics of the Boreal Forest : The Kluane Project** Vancouver Charles J. Krebs Professor of Zoology University of British Columbia, Edmonton Stan Boutin Professor of Zoology University of Alberta, Rudy

Boonstra Professor of Physiology and Zoology University of Toronto, 2001-03-31 The boreal forest is one of the world's great ecosystems stretching across North America and Eurasia in an unbroken band and containing about 25% of the world's closed canopy forests. The Kluane Boreal Forest Ecosystem Project was a 10 year study by nine of Canada's leading ecologists to unravel the impact of the snowshoe hare cycle on the plants and the other vertebrate species in the boreal forest. In much of the boreal forest the snowshoe hare acts as a keystone herbivore fluctuating in 9-10 year cycles and dragging along secondary cycles in predators such as lynx and great horned owls. By manipulating the ecosystem on a large scale from the bottom via fertilizer additions and from the top by predator exclosures they have traced the plant herbivore relationships and the predator prey relationships in this ecosystem to try to answer the question of what drives small mammal population cycles. This study is unique in being large scale and experimental on a relatively simple ecosystem with the overall goal of defining what determines community structure in the boreal forest. Ecosystem Dynamics of the Boreal Forest. The Kluane Project summarizes these findings weaving new discoveries of the role of herbivores, turned predators, compensatory plant growth and predators eating predators with an ecological story rich in details and clear in its findings of a community where predation plays a key role in determining the fate of individuals and populations. The study of the Kluane boreal forest raises key questions about the scale of conservation required for boreal forest communities and the many mammals and birds that live there.

*Algonquin Wildlife* Norm Quinn, 2002-08-26 *Algonquin Wildlife: Lessons in Survival* is a celebration of the vast array of wildlife studies ongoing in Ontario's very first provincial park. Probably more research has been done in Algonquin than in any other protected landscape in the world. Norm Quinn, long time Park Management Biologist in Algonquin, has been fortunate to know and to work with many of those dedicated and unique wildlife researchers who roam and probe the forests and lakes in search of Nature's secrets. His knowledge, experience and sense of humour combine to transform technical biological studies on moose, wolves, fish and other creatures of the wild into entertaining and inviting stories without losing the significance of the research. This is also a book about Algonquin, Ontario's flagship Park and one of the foremost canoe tripping wilderness sites in the world. Through *Algonquin Wildlife* you are invited to explore this relatively unknown but vital part of the Park's heritage, a must for both seasoned and budding naturalists.
