place 14 The Hill Country growing region the state's second largest suffered a 37.1% decline in production between 2015 and 2017. The decline was attributed to a severe rainy season culminating in extensive vine destroying rot and mildew. 15 Blanc du Bois and Black Spanish grapes are the dominant grapes produced in the Southeast Texas and Gulf Coast growing region comprising 74.7% of production. Combined in 2017 they represent 54.8% of statewide production in those grapes.

So You Think You Know California Wines? (2016) Marques Vickers, 2016-05-15 So You Think You Know California Wines is designed to simplify your understanding by identifying growing trends, grape descriptions and the history of California wine production. The edition profiles the 27 top wine grapes and principal growing regions. The 81 page edition is ideal for wine collectors, winemakers and anyone who appreciates a world class California vintage. The following are just fourteen from hundreds of little known facts about California wines and the 2015 grape harvest. 1 Of California's 3.7 million tons of wine grapes harvested in 2015, the Central Valley growing region raised 73% and 70% of the white wine grapes. California grows 17% more red wine grapes than white. In 1976 the red grape ratio was two to one over whites. 2 The Napa Valley accounted for only 4.5% of the red wine grapes and 2% of the white. The Sonoma Marin region accounted for 5% of the red and 4.7% of the white wine grapes. 3 The average value of Napa red wine grapes is over 10.12 times and for white grapes 6.12 times more than the Central Valley. Sonoma Marin's regional red grapes are valued over 6.12 times and for white grapes 5.12 times more. 4 The California drought had a negligible effect on the Central Valley's 2015 grape yields as production nearly equaled their 2014 figures. 5 Wine grape production yields declined dramatically in the Napa Valley 29.4%, Sonoma Marin 28.8%, Central Coast 28.8% and Monterey Valley regions 37.8%. 6 Cabernet Sauvignon is the most lucratively priced wine grape in California and the second most cultivated. Napa Valley grape growers concentrated 59% of their red grape production into Cabernet Sauvignon. Its value is 14 times the Central Valley equivalent. Yields declined 23.37% in the premium wine regions. 7 During the 1976 harvest Chardonnay represented less than 2% of California's white wine grape production. In the 2015 harvest Chardonnay was the state's largest grown grape accounting for 38% of the white wine grapes and over 16% of the overall harvest production. 2105 yields were down 25.32% throughout premium wine regions. 8 Juice Valuation is the elemental cost of grape juice contained in a bottle of wine excluding any related post harvest production expenses, financing costs, marketing expenses and/or retail mark up. The 2015 juice price on a bottle of Napa Valley Cabernet Sauvignon was \$8.42, Zinfandel \$4.71, Merlot \$4.35, Pinot Noir \$3.76 and Chardonnay \$3.60. Within the Central Valley region the comparable juice prices average between 40 and 75 cents per bottle. 9 During the 2015 harvest the wine grapes that experienced the greatest production increase from 2014 included Symphony Barbera, Rubired, Pinot Gris, Muscat of Alexandria, Burger and Petite Sirah. 10 During the 2015 harvest the wine grapes that experienced the greatest production decrease from 2014 included Muscat Blanc, Triplett Blanc, Sauvignon Blanc, Cabernet Franc, Viognier, Grenache, Chenin Blanc and Syrah. 11 Real Estate property values are the number one price determinant in the valuation of a grape's price. Elevated

land values in Napa and Sonoma County directly reflect the significantly appreciated grape values 12 Two of over thirty hybrid grapes introduced by University of California Davis viticulturist Dr Harold Olmo account for 17% of the overall red wine grape production 13 During the 1976 harvest six of the most popular California grapes were Carignan Grenache Barbera Ruby Cabernet French Colombard and Chenin Blanc Today only Rubired and French Colombard ranks in the top ten and both are used for blending or bulk wines 14 Production statistics become significant because planting decisions cannot be immediately adjusted Grapevines require three years after planting before yielding fruit and have an average lifespan of 27 years Many vines are replaced afterwards due to declining production yields and financial depreciation considerations

98% of the wine grapes grown are east of the Cascade Mountains In 1970 there were only ten official wineries in all of Washington By 2000 that figure had expanded to 163 and by 2010 more than 700 wineries Currently it is estimated that there are over 900 wineries 14 The two largest Washington growing regions the Yakima and Walla Walla Valleys share the topography of a desert landscape and the tributary waters of the Columbia River branching out via the Yakima and Walla Walla Rivers 15 The Walla Walla Valley averages approximately the same annual rainfall levels as the Napa Valley 21 inches The Yakima Valley received even less rainfall 8 inches but is supplemented by a snowfall level of 23 inches 16 The Yakima Valley profits from the accumulating rains and snows of Mount Ranier and Mount Adams part of the Cascade Mountain Range The melting Spring snowpack results in substantial volumes of water that are channeled into the region and directed by canals and aqueducts into the agricultural basins and hillsides
