There have been significant improvements in the performance of the NHS particularly in those areas targeted by the Department of Health, the Department such as hospital waiting times and outcomes for patients with cancer and coronary heart disease. But productivity has actually fallen over the last decade. The Office for National Statistics estimates that since 2000 total NHS productivity fell by an average of 0.2% a year and by an average of 1.4% a year in hospitals. The trend of falling productivity will need to be reversed if the NHS is to meet the Department's productivity challenge to deliver up to 20 billion of efficiency savings a year by 2014-15 without compromising services. The Payment by Results approach, a tariff for procedures, has driven some improvements but it only covers 60% of hospital activity and there is substantial variation in hospital costs and activity. The tariff system could, though, prioritise price over quality. National pay contracts have not yet been used to manage staff performance effectively and consultants' productivity has fallen at the same time as they have had significant pay rises. There are risks to the NHS being able to deliver up to 20 billion savings annually for reinvestment in healthcare alongside

implementing a substantial agenda of reform Productivity improvements will be key to delivering these savings *How to Survive Your Hospital Stay* Gail Van Kanegan, Michael Boyette, 2003-12-04 GET WELL AND GET OUT Most people will find themselves or a loved one faced with a hospital stay at some point in their lives The prospect is scary enough even without worrying about hospital infections adverse drug reactions and other alarming risks that have been documented by the Centers for Disease Control and reported widely in medical journals and the national media But help is here Written by an experienced nurse practitioner and recognized hospital safety expert How to Survive Your Hospital Stay offers simple steps to take before during and after hospitalization in order to take control of the entire process including Evaluating whether a hospital stay is really necessary Dealing with the top ten risks from medication errors to malnutrition Getting the staff on your side Choosing the right doctor Negotiating the insurance minefield Making sure you are discharged safely and will get the follow up care you need Packed with advice that will help people feel better when they are ill and at their most vulnerable this essential guide provides a reassuring road map for avoiding mishaps along the route to recovery **Department of Labor-Federal Security Agency Appropriation Bill for 1946** United States.
