Environmental Governance in Latin America Fabio De Castro, Barbara Hogenboom, Michiel Baud, 2016-03-24 This book is open access under a CC BY license The multiple purposes of nature livelihood for communities revenues for states commodities for companies and biodiversity for conservationists have turned environmental governance in Latin America into a highly contested arena In such a resource rich region unequal power relations conflicting priorities and trade offs among multiple goals have led to a myriad of contrasting initiatives that are reshaping social relations and rural territories This edited collection addresses these tensions by unpacking environmental governance as a complex process of formulating and contesting values procedures and practices shaping the access control and use of natural resources Contributors from various fields address the challenges limitations and possibilities for a more sustainable equal and fair development In this book environmental governance is seen as an overarching concept defining the dynamic and multi layered repertoire of society nature interactions where images of nature and discourses on the use of natural resources are mediated by

contextual processes at multiple scales **The Cambridge Economic History of Latin America: Volume 2, The Long Twentieth Century** Victor Bulmer-Thomas, John Coatsworth, Roberto Cortés Conde, 2006-01-23 An indispensable reference work for anyone interested in Latin America's economic development Environmental Security in Latin America Gavin O'Toole, 2017-05-18 This book examines security in Latin America through an environmental lens at a time when this region faces a broad and growing spectrum of threats The book considers the backdrop against which security debates about Latin America have been conducted the extent to which scholarship has been dominated by traditional US strategic concerns and how in the changing context at the end of the Cold War some policymakers within Latin America itself at both national and regional levels began to reposition security It argues that traditional security scholarship focusing on military defence and strategic affairs in this region is hard to explain and out of date and offers reasons why a new focus on environmental threats within a broader human security perspective has much to offer this field Such a focus is justified by the scale of the challenges that environmental degradation is posing in Latin America and the very real impact of climate change there The book considers how the various theoretical possibilities of the term environmental security all have some potential application to this region where the natural environment is rapidly being securitized by military forces on behalf of their states Finally it proposes that a fruitful approach to Latin America might be one where human and environmental security have parity This book will be of interest to students of environmental security Latin American security human geography and IR in general **Globalization and New Geographies of Conservation** Karl S. Zimmerer, 2006-09-15 Examining the geographical dimensions of environmental management and conservation activities implemented on landscapes worldwide Globalization and New Geographies of Conservation creates a new framework and collects original case studies to explore recent developments in the interaction of humans and their environment Globalization and New Geographies of Conservation makes four important arguments about the recent coupling of conservation and globalization that is reshaping the place of nature in human environmental change First it has led to an unprecedented number of spatial arrangements whose environmental management goals and prescribed activities vary along a spectrum from strict biodiversity protection to sustainable utilization involving agriculture food production and extractive activities Conservation and globalization are also leading by necessity to new scales of management in these activities that rely on environmental science thus shifting the spatial patterning of humans and the environment This interaction results as well in the unprecedented importance of boundaries and borders transnational border issues pose both opportunities and threats to global conservation proposed by organizations and institutions that are themselves international Lastly Globalization and New Geographies of Conservation argues that the local level has been integral to globalization while the regional level is often eclipsed at the peril of the successful implementation of conservation and management programs Bridging the gap between geography and life science Globalization and New Geographies of Conservation will appeal to a broad range of students of the environment conservation
