were asked to pay attention to scientific practices in meticulous detail and along multiple dimensions including the material social and psychological. Following this turn, the interest in scientific practices continued to increase and had an indelible influence in the various fields of science studies. No doubt the practice turn changed our conceptions and approaches of science, but what did it really teach us? What does it mean to study scientific practices? What are the general lessons, implications, and new challenges? This volume explores questions about the practice turn using both case studies and theoretical analysis. The case studies examine empirical and mathematical sciences including the engineering sciences. The volume promotes interactions between acknowledged experts from different, often thought of as conflicting, orientations. It presents contributions in conjunction with critical commentaries that put the theses and assumptions of the former in perspective. Overall, the book offers a unique and diverse range of perspectives on the meanings, methods, lessons, and challenges associated with the practice turn.

The Construction of Social Judgments Leonard L. Martin, Abraham Tesser, 2013-05-13 Researchers have been addressing social judgment from a cognitive perspective for more than 15 years. Within recent years, however, it has become increasingly clear that many of the models and assumptions initially adopted are in need of revision. The chapters in this volume point out where the original models and assumptions have fallen short and suggest directions for future research and theorizing. The contributors address issues related to judgment, memory, affect, attitudes, and self-perception. In addition, many present theoretical frameworks within which these different issues can be integrated. As such, this volume represents the transition from one era of social cognition research to the next.

Chapters explore how children's social competencies reflect the features of the social worlds in which they live and grow. In addition, chapters examine the extent that different cultural value orientations manifest in children's social functioning and describes how parents in autonomy-oriented cultures tend to value different social skills than parents with relatedness or autonomous relatedness orientations. The book concludes with recommendations for future research directions. Topics featured in this book include Gender development in young children, Peer interactions and relationships during the preschool years, Sibling interactions in western and non-western cultural groups, The roles of grandparents in child development, Socialization and development in refugee children, Child development within institutional care. *Children's Social Worlds in Cultural Context* is a valuable resource for researchers, clinicians, practitioners, and graduate students in developmental psychology, child and school psychology, social work, cultural anthropology, family studies, and education.
