**Local Science Vs. Global Science** Paul Sillitoe, 2009 Technological capability has led through Euro American global domination to the muting of other cultural views and values even threatening their continued existence There is a growing realization that the diversity of knowledge systems demand respect some refer to them in a conservation idiom as alternative knowledge banks The scientific perspective is only one We now have many examples of the soundness of local science and practices some previously considered primitive and in need of change However this book goes beyond demonstrating the soundness of local science and arguing for the incorporation of others knowledge in development to maintain that we need to look quizzically at the foundations of science itself and further challenge its hegemony not only over local communities in Africa Asia the Pacific and elsewhere but also the global community Publisher *Climate Crisis Fun Facts!* Hermann Observer, 2023-09-21 It s time for Climate Crisis Fun Fact Number One There is no Climate Crisis The anthropogenic CO doomsday narrative is a malignant mainstream myth The weather is not your fault The climate weather over time isn t either Yes the climate is changing It is changing because it has never not changed But no the pollutant CO anthropogenic or otherwise is not driving this change The only thing CO is driving is plant growth The information you are being fed is distorted The causes for climate change are natural They are natural variabilities cycles we do not yet fully understand How do we know this We know this because of the historical records our ancestors have left us We know this because of the physical evidence Nature has left us from the vast pre industrial past We know this because of the changes in Earth s movements through space What we are experiencing has all happened before only it was much more drastic This is why we don t need to worry about slowing down or stopping something we have been conditioned to fret about These changes can t be stopped and we can t save the planet because the planet doesn t need saving We only need to see how we can best adapt to these changes something humankind has already been doing for countless generations But how could this be you ask How could the the world have reached a consensus that CO is an existential threat when it isn t Because consensus is a political not a scientific term and those who benefit from this imaginary doomsday threat have also control public opinion Certain professions institutions and industries benefit either directly or indirectly from the CO panic plot and actively manipulate what we see read and hear They do this by exploiting three well known human weaknesses The first one is fear Fear is easily planted in the minds of the uninformed Unfortunately most of us are highly uninformed Worse if no real danger is present the human mind will proactively seek out things to fear

until it finds one thanks evolutionary process We are highly receptive to potential danger and apocalyptic climate hysteria satisfies this psychological predisposition Our second weakness is our need to conform Being firmly rooted in strict social hierarchies humans have a primal need to belong This need is so great that we would rather defy what our own senses tell us than be banned as a social outcast Weakness number three is our anthropocentrism Humans innately feel they are the center of the universe They also sense they can somehow control Nature Neither being true this odd mindset only leads to hubris narcissism and harmful decision making We lack humility in other words But humility is a good thing And this book is an exercise in humility It is a modest attempt to confront today s presumptuous CO Climate Crisis consensus with uncommon common sense It is a compilation of well documented facts and unconventional observations that question today s climate science status quo It will help reveal how a lack of critical thinking extreme bias heavy handed fear mongering mass indoctrination methods and quasi religious fervor have trapped us in a straitjacket of Orwellian groupthink We need to remind ourselves that only the individual can think No one can force you to succumb to mass delusion if you choose not to People who succumb to apocalyptic climate fear are the only ones in danger because popular hysteria is the plague of our age not CO Defend yourself by changing the way you think May the skepticism be with you

**Cellular Phones, Public Fears, and a Culture of Precaution** Adam Burgess,2004 This is the first account of the health panic surrounding cellular phones that developed in the mid 1990s Treating the issue as more social construction than evident scientific problem it tells the story of how this originally American anxiety diffused internationally having an even bigger impact in countries such as Italy Burgess highlights the contrasting reactions to the issue ranging from positive indifference in Finland to those such as the UK where precautionary measures were taken These differences are located within the emergence of a precautionary culture driven by institutional insecurity that first appeared in the US and is now most evident in Europe Anxieties about cell phone radiowaves are also situated historically in the very different reactions to technologies such as x rays and in the more similar microwave suspicions about television In addition Burgess outlines a history and sociology of what is despite media driven anxieties a spectacularly successful device
