Terrestrial Biospheric Carbon Fluxes Quantification of Sinks and Sources of CO₂ Joe Wisniewski, R. Neil Sampson, 2012-12-06 Towards the Balance and Management of the Carbon Budget of the Biosphere The current state of misunderstanding of the global C cycle and our failure to resolve an issue that has been debated for 100 years Jones and Henderson Sellers 1990 speaks loudly about the limitations of modern science when faced with the complexity of the biosphere Efforts to understand and balance the global C budget have gone through several phases First was a holistic view of the C budget as part of efforts to understand the geochemistry of the Earth e g Clarke 1908 Next came a period of data collection and synthesis which focused on the diversity of sectors of the biosphere This phase culminated in the early 1970 s with the realization that humans were greatly impacting the global C cycle as measured at the Mauna Loa Observatory Keeling et al 1973 New syntheses of the global C budget emerged at this time Woodwell and Pacan 1973 Bolin et al 1979 The next phase was one of controversy and intense focus on particular sectors of the biosphere The controversy rested on discrepancies about the role of the terrestrial biota in the global C cycle and the failure to account for sufficient C sinks to absorb all the C emitted by land use change in the tropics Woodwell et al 1978 1983 Houghton et al 1983 *Terrestrial biospheric carbon fluxes: quantification of sinks and sources of CO₂* Joe Wisniewski, 1993 Terrestrial Biospheric Carbon Fluxes Joe Wisniewski, R. Michael J. Apps, David T. Price, 2013-06-29 Globally forest vegetation and soils are both major stores of terrestrial organic carbon and major contributors to the annual cycling of carbon between the atmosphere and the biosphere Forests are also a renewable resource vital to the everyday existence of millions of people since they provide food shelter fuel raw materials and many other benefits The combined effects of an expanding global population and increasing consumption of resources however may be seriously endangering both the extent and future sustainability of the world's forests About thirty chapters cover four main themes the role of forests in the global carbon cycle effects of past present and future changes in forest land use the role of forest management products and biomass on carbon cycling and socio economic impacts **Global**

Environmental Change National Research Council, Policy Division, Board on Sustainable Development, Committee on Global Change Research, 1999-09-14 How can we understand and rise to the environmental challenges of global change One clear answer is to understand the science of global change not solely in terms of the processes that control changes in climate and the composition of the atmosphere but in how ecosystems and human society interact with these changes In the last two decades of the twentieth century a number of such research efforts supported by computer and satellite technology have been launched Yet many opportunities for integration remain unexploited and many fundamental questions remain about the earth's capacity to support a growing human population This volume encourages a renewed commitment to understanding global change and sets a direction for research in the decade ahead Through case studies the book explores what can be

learned from the lessons of the past 20 years and what are the outstanding scientific questions Highlights include Research imperatives and strategies for investigators in the areas of atmospheric chemistry climate ecosystem studies and human dimensions of global change The context of climate change including lessons to be gleaned from paleoclimatology Human responses to and forcing of projected global change This book offers a comprehensive overview of global change research to date and provides a framework for answering urgent questions

Managing Forest Carbon in a Changing Climate Mark S. Ashton, Mary L. Tyrrell, Deborah Spalding, Bradford Gentry, 2012-01-06 The aim of this book is to provide an accessible overview for advanced students resource professionals such as land managers and policy makers to acquaint themselves with the established science management practices and policies that facilitate sequestration and allow for the storage of carbon in forests The book has value to the reader to better understand a carbon science and management of forests and wood products b the underlying social mechanisms of deforestation and c the policy options in order to formulate a cohesive strategy for implementing forest carbon projects and ultimately reducing emissions from forest land use

Subcommittee on National Economic Growth, Natural Resources, and Regulatory Affairs, 1999 Economics of Forestry Roger A. Sedjo, 2018-02-06 This title was first published in 2003 The Economics of Forestry is a specialized subset of resource economics addressing a specific natural resource the forest which is usually a relatively long time period Hence forest economics has characteristics similar to nonrenewable resources but also has those of a renewable resource in some cases approaching those of agriculture This volume comprises some of the most significant journal essays in forest economics and forest policy The International Library of Environmental Economics and Policy explores the influence of economics on the development of environmental and natural resource policy In a series of twenty five volumes the most significant journal essays in key areas of contemporary environmental and resource policy are collected Scholars who are recognized for their expertise and contribution to the literature in the various research areas serve as volume editors and write essays that provides the context for the collection Volumes in the series reflect three broad strands of economic research including 1 Natural and Environmental Resources 2 Policy Instruments and Institutions and 3 Methodology The editors in their introduction to each volume provide a state of the art overview of the topic and explain the influence and relevance of the collected papers on the development of policy This reference series provides access to the economic literature that has shaped contemporary perspectives on land use analysis and policy Macromolecular Characterization of Hydrocarbons for Sustainable Future Uttam Kumar Bhui, 2021-03-10 This book discusses the macromolecular characterization of hydrocarbon components and their industrial applications for sustainable future development It provides efficient integrated solutions and feasible industrial applications for sustainable cleaner and greener future The book covers recent trends in the use of hydrocarbons such as crude oil coal and shale biomass and other carbon materials Various topics covered in this book include challenges in mature field redevelopment enhanced oil recovery optical characteristics of petroleum crudes surfactants brine solutions challenges and issues in processing hydrocarbons coal for future cleaner fuel and chemicals and biomass for fuels and chemicals The book is useful for the researchers and professionals working in the area of petroleum engineering Greenhouse Gas Mitigation Assessment: A Guidebook Jayant A. Sathaye, Stephen Meyers, 2013-11-21 This book describes guidelines prepared by the U S Country Studies Program for the evaluation of options to mitigate greenhouse gas emissions The U S Country Studies Program developed these guidelines in collaboration with Lawrence Berkeley National Laboratory to provide developing countries and countries with economies in transition with reference materials for national mitigation assessments Over 50 countries participating in the program have used the guidelines which have been refined to reflect their comments The guidelines delineate a step wise methodology for evaluating greenhouse gas mitigation options for the energy and non energy sectors and describe the applications of common analytical tools The U S Country Studies Program uses these guidelines in conjunction with intensive training workshops and follow up technical assistance

during the lifetime of each country's study. The program uses similar reference materials to assist countries with their greenhouse gas emission inventories and evaluations of climate change vulnerability and adaptive responses. These guidelines serve three purposes: to assist countries in making decisions about the scope and methodology for mitigation assessments; to provide countries with guidance and step-by-step instructions on each element of a mitigation assessment; and to help countries determine which analytical tools are best suited to their needs and describe procedures for applying these tools. This book describes the application of the most common and readily available methods and analytical tools. Countries are encouraged where appropriate to use their own methods.
