

Evaluation of explosives

Interior ballistics and detonics

- The main focus is the measurement of performance characteristics, safety parameters and the investigation of phenomena:
- Gun propellants, solid rocket propellants, explosives and special systems are investigated, especially new substances and propellants
- The infrastructure (incl. shooting range, explosives bunker, rocket test stand, intrinsically safe boxes) enables investigations from a laboratory scale up to the kg range
- Beside standard test methods and evaluation processes (e. g. ballistic vessels with interior ballistic analysis), measurement technologies and experimental setups are further developed (e. g. miniaturised detonation speed measurement), and modelling and simulation are researched.

Test Methods for Explosives Muhamed Suceska,2012-10-17 It seems that there is no book that treats the measurement of the physical parameters of explosives as its only subject although limited information is available in a number of books Therefore I have tried to bridge this gap in the literature with this book A large number of various physical parameters have to be determined experimentally in order to test or characterise an explosive Various physical principles have been applied for such measurements Accordingly a large number of different experimental methods exist as well as various testing apparatuses and procedures On the other hand great progress has been made recently in the study of detonation phenomena New measuring techniques can assess extremely short processes to below nanoseconds scale They make it possible to determine important parameters in detonation physics I have made a great attempt to cover the available literature data on the subject Because it would be a highly demanding task to include in a single volume all the methods that are in use by various testing agencies I have tried to give primarily the principles for determination of individual physical parameters of explosives by different measuring methods as well as data treatment procedures *Test Methods for Explosives* Muhamed
