Neuropsychological Interpretation of Objective Psychological Tests Charles J. Golden, Patricia Espe-Pfeifer, Jana Wachslar-Felder, 2000-04-30 The purpose of this book is to provide a compendium of the possible interpretations that can be used with each of a variety of common tests usually included in a neuropsychological test battery The first chapter discusses some of the pitfalls and cautions when comparing tests while the second chapter examines administrative and scoring issues which may be unclear or unavailable for a given test The remainder and heart of the book is the analysis of the interpretative issues for each of the tests Each chapter is designed to present in a succinct format day to day interpretative strategies and questions for each test The organization of the text allows the user to get to the core interpretative issues quickly so that there is no need to wade through unnecessary expositions These strategies and interpretative issues will in turn generate questions for the examiner to address and can lead to the accurate analysis of each test as well as indicating the need for additional tests to be included in a given assessment Not all available neuropsychological tests have been included however these are believed to be a representative sample of the tests in use Many of the interpretative strategies cited can be used with other tests that focus on similar skills and abilities The book is intended for beginners in the field as well as individuals who have limited experience The majority of practitioners who use neuropsychological tests only occasionally will also find the information of great use

Principles of Assessment and Outcome Measurement for Occupational Therapists and Physiotherapists Alison Laver Fawcett, 2013-03-15

This textbook on assessment and outcome measurement is written for both occupational therapy and physiotherapy students and qualified therapists. It begins by defining what is meant by assessment, outcome evaluation and measurement and discussing the complexity of therapy assessment and measurement including the challenge of measuring human behaviour and the impact of factors such as task demand and context including the environment. Methods of data collection e.g. observation, interview, standardised testing and sources e.g. self-report proxy for collecting information about clients are then reviewed and the main purposes of assessment e.g. descriptive, evaluative, predictive, discriminative presented. The book then addresses the topics of standardisation, levels of measurement, reliability, validity and clinical utility. There is a chapter describing and applying models for categorizing levels of function to aid assessment and measurement. The concept of clinical reasoning and reflective practice is then explored. Application of principles is supported through detailed case studies and worksheets and the criteria for test critique and guidelines for choosing a particular assessment approach are discussed.
