Regulation of red cell life-span, erythropoiesis, senescence and clearance Lars Kaestner,Anna Bogdanova,2014-12-03 Human red blood cells are formed mainly in the bone marrow and are believed to have an average life span of approximately 120 days However is it true for all red blood cells What are the changes associated with red cell maturation adulthood and senescence What are the determinants of red cell life span and clearance What are the

mechanisms in control of red cell mass in healthy humans and patients with various forms of anemia What are the markers of circulating red cell senescence and in cells during storage and transfusion Within the life span may properties of red cells change leading to age mixed circulating cell populations Although these cells appear to be genetically terminated by the time they are released into the blood stream they undergo surprisingly versatile modifications depending on the life style and health conditions of a human host Numerous disorders are believed to be associated with facilitated ageing of red blood cells In vitro ageing and damage of red blood cells during storage is yet one more important issue related to the risks and efficiency of blood transfusion Many of the mechanisms behind such effects are far from being fully understood In this context the Research Topic is set to include articles in the field of biochemical investigations biophysical approaches physiological and clinical studies related to red blood cell maturation and aging This includes Original Research Methods Hypothesis and Theory Reviews and Perspectives

The spatiotemporal dynamics of longevity-defining cellular processes and its modulation by genetic, dietary and pharmacological anti-aging interventions Vladimir I. Titorenko, Troy A. A. Harkness, Aging of multicellular and unicellular eukaryotic organisms is a highly complex biological phenomenon that affects a plethora of processes within cells This wide array of longevity defining cellular processes which are governed by an evolutionarily conserved signaling network includes oxidative metabolism and protein synthesis in mitochondria lipid and carbohydrate metabolism NAD homeostasis amino acid biosynthesis and degradation ammonium and amino acid uptake ribosome biogenesis and translation proteasomal protein degradation nuclear DNA replication chromatin assembly and maintenance actin organization apoptosis necrosis autophagy protein folding stress response signal transduction cell cycle and cell growth The focus of this Frontiers Special Topic Issue is on an important conceptual advance in our understanding of how cells integrate and control these numerous processes and how genetic dietary and pharmacological anti aging interventions extend longevity by altering their functional states and spatiotemporal dynamics The Issue will highlight the various strategies used by evolutionarily diverse organisms for coordinating these longevity defining cellular processes in space and time critically evaluate the molecular and cellular mechanisms underlying such coordination and outline the most important unanswered questions and directions for future research in this vibrant and rapidly evolving field

Predicting Presidential Elections and Other Things, Second

Edition Ray Fair, 2011-12-14 It's the economy stupid as Democratic strategist James Carville would say. After many years of study, Ray C. Fair has found that the state of the economy has a dominant influence on national elections. Just in time for the 2012 presidential election, this new edition of his classic text *Predicting Presidential Elections and Other Things* provides us with a look into the likely future of our nation's political landscape, but Fair doesn't stop there. Fair puts other national issues under the microscope as well, including congressional elections, Federal Reserve behavior, and inflation. In addition, he covers topics well beyond today's headlines, as the book takes on questions of more direct personal interest, such as wine quality, predicting football games, and aging effects in baseball. Which of your friends is most likely to have an extramarital affair? How important is class attendance for academic performance in college? How fast can you expect to run a race or perform some physical task at age 55, given your time at age 30? Read *Predicting Presidential Elections and Other Things* and find out. As Fair works his way through an incredibly broad range of questions and topics, he teaches and delights. The discussion that underlies each chapter topic moves from formulating theories about real-world phenomena to lessons on how to analyze data, test theories, and make predictions. At the end of this book, readers will walk away with more than mere predictions. They will have learned a new approach to thinking about many age-old concerns in public and private life and will have a myriad of fun facts to share.

Cancerland David Scadden, Michael D'Antonio, 2018-07-10 An Amazon Best of the Month Book. For all the insight he offers into the hard science and thorny logistics of studying cancer, Dr. Scadden's most moving passages consider the effect of the disease on the people who suffer from it and those who care for them. *The Wall Street Journal*: A doctor's riveting story of loss and hope in the world of cancer. What is it like to encounter cancer? How does it feel to face the unknown, to enter a world of hope, loss, and dread? From the diagnosis of his childhood friend's mother to his poignant memories in the lab, David Scadden has seen the unknown world of cancer from the lens of a young boy, a classmate, a researcher, a friend, a doctor, and a neighbor. Scadden chronicles his personal memories of cancer, his visits to his sick neighbor and his classmate who left school and never came back. Now Dr. David Scadden, co-founder of the Harvard Stem Cell Institute and one of the world's leading experts on immunology and oncology, writes his memoir *Cancerland* with Pulitzer Prize-winning journalist Michael D. Antonio. With riveting stories and moving compassion, Scadden and D. Antonio paint a still rapidly changing landscape in the context of all too common stories of loss. Ranging from Scadden's personal childhood memories to his triumphs and regrets as a doctor, Scadden illuminates a light at the end of a dark tunnel. Through opening a window into the science of medicine in the world of the unknown, Scadden and D. Antonio humanize cancer while inspiring action that we all so desperately need.
