Red Green color blindness is by far the most common 99% form and causes problems in distinguishing reds and greens. Another color deficiency Blue Yellow also exists but is rare 1% and there is no commonly available test for it. There is no treatment for color blindness nor is it usually the cause of any significant disability. However it can be very frustrating for individuals affected by it. Those who are not color blind seem to have the misconception that color blindness means that a color blind person sees only in black and white or shades of gray. While this sort of condition is possible it is extremely rare. The Ishihara color test is a test for color blindness. It was named after its designer Dr Shinobu Ishihara 1879 1963 a professor at the University of Tokyo who first published his tests in 1917.
