The Hatfield Memorial Lectures Vol :

The Hatfield Memorial Lectures P R Beeley, 2005-10-31 This is the third volume in a series which brings together a selection of the currently available lectures based on broad subject groupings It focuses on two themes process metallurgy including the technical aspects of plant design and operation and the organisation of the iron and steel industry including its general structure and economic circumstances Whilst there is occasional overlap with the themes of Volume 1 materials properties behaviour and materials applications and Volume 2 metallography and the structure of iron and steels the current volume compliments the earlier ones and completes the original concept of five themes to bring the anthology up to the present day

The Hatfield Memorial Lectures Volume III Peter Beeley, 2005-11-14 This is the third volume in a series which brings together a selection of the currently available lectures based on broad subject groupings It focuses on two themes process metallurgy including the technical aspects of plant design and operation and the organization of the iron and steel industry including its general structure and economic circumstances The lectures are arranged in date sequence within each group providing a snapshot of the respective subject areas over the whole period These topics have a significance in the fields of materials and across diverse branches of engineering *Materials World*, 2002 Duplex Stainless Steels Iris Alvarez-Armas, Suzanne Degallaix-Moreuil, 2013-01-16 Duplex Stainless Steels DSSs are chromium nickel molybdenum iron alloys that are usually in proportions optimized for equalizing the volume fractions of austenite and ferrite Due to their ferritic austenitic microstructure they possess a higher mechanical strength and a better corrosion resistance than standard austenitic steels This type of steel is now increasing its application and market field due to its very good properties and relatively low cost This book is a review of the most recent progress achieved in the last 10 years on microstructure corrosion resistance and mechanical strength properties as well as applications due to the development of new grades Special attention will be given to fatigue and fracture behavior and to proposed models to account for mechanical behavior Each subject will be developed in chapters written by experts recognized around the international industrial and scientific communities The use of duplex stainless steels has grown rapidly in the last 10 years particularly in the oil and gas industry chemical tankers pulp and paper as well as the chemical industry In all these examples topics like welding corrosion resistance and mechanical strength properties mainly in the fatigue domain are crucial Therefore the update of welding and corrosion properties and the introduction of topics like texture effects fatigue and fracture strength properties and mechanical behavior modeling give this book specific focus and character **Bulletin** United States.
