The Internet For Surgeons:

The Internet for Surgeons Jeff W. Allen, 2012-12-06 Advances in surgery have reached an exponential scale and the changes of the last decade of the twentieth century have become common practice. Imagination and foresight are the more visible standards for professional appointments than ever before. The fiber optic cable, computer, and Internet are the workhorses of this sea change and surgeons must master all of them to remain intellectually and technically up to date. There can be no better explanation for the genuine need for this book. The transmission of knowledge and technical skills from one generation to another has been a common practice in surgery for nearly 200 years. Past experiences of surgeons have focused upon an understanding of disease states, a prompt diagnosis of a correctable illness, and its appropriate evaluation and, most importantly, the technical conduct of an operation where indicated to provide relief to and/or cure of the patient. Fascinatingly, this little book tends to fulfill that same role with respect to the newly emerged technology of the Internet, computation, and telemedicine. In essence, this book seeks and to a remarkable degree achieves the transmission of both knowledge and technical skill in an easily usable and clearly written format. Jeff W. Allen has provided an educational orientation with which he is familiar both as a recent pupil and now as a teacher of surgical procedures. This is not unlike the kind of education that has gone on between trainee surgeons and master surgeons around the world. In this case, Dr. The Internet for Surgeons Jeff W. Allen, 2007-05-08. The Internet has proven to be a great resource for the medical community. This text focuses on the needs of surgeons and aims to educate them on how to use the internet in their day-to-day practice and life. A central feature of the book is the extensive lists of annotated surgery-specific internet sites as well as general health-related internet sites and department of surgery sites. Cordy, Joanna Ng, Yelena Yesha, 2010-10-19 I love the idea of a Smart Internet that lets users improve many parts of their lives pulling together data and services from around the internet. This won't happen with large unwieldy programming requirements; it will happen because we're moving towards integrated simple tasks that users can do on an every-day basis. With services available on the cloud with analytics available with data that has meaning to the user and not just to some protocol parser with all of these users at all levels will be able to do a better job. The users may be small and large enterprises, local governments, individuals, etc. All of this means that as the world is becoming more intelligent, instrumented, and more interconnected, we'll be headed towards smarter health care, smarter cities, and smarter lives. Gennaro A. Cuomo, IBM Software Group Vice President and IBM Fellow WebSphere Chief Technology Officer. Congratulations to the team on the publication of this first volume of the IBM CAS Research book series. This is a significant milestone for IBM CAS Research.
