The Internet Challenge To Television:

The Internet Challenge to Television Bruce M. Owen, 2009-06-01 After a half century of glacial creep television technology has begun to change at the same dizzying pace as computer software What this will mean for television for computers and for the popular culture where these video media reign supreme is the subject of this timely book A noted communications economist Bruce Owen supplies the essential background a grasp of the economic history of the television industry and of the effects of technology and government regulation on its organization He also explores recent developments associated with the growth of the Internet With this history as a basis his book allows readers to peer into the future at the likely effects of television and the Internet on each other for instance and at the possibility of a convergence of the TV set computer and telephone The digital world that Owen shows us is one in which communication titans jockey to survive what Joseph Schumpeter called the gales of creative destruction While the rest of us simply struggle to follow the new moves believing that technology will settle the outcome Owen warns us that this is a game in which Washington regulators and media hyperbole figure as broadly as innovation and investment His book explains the game as one involving interactions among all the players including consumers and advertisers each with a particular goal And he discusses the economic principles that govern this game and that can serve as powerful predictive tools *Multimedia and Interactive*

Television Versus the Internet Barrie Gunter, 2010-09-01 This book will explore the questions raised by the technological developments that have encouraged the multiplication of TV channels TV is moving through a period of rapid change Governments around the world are switching from analogue to digital forms of transmission to further expand the amount of content that TV signals can carry At the same time competition for eyeballs has also grown from outside that traditional marketplace with the emergence of the Internet The roll out of broadband and increased bandwidth has had the greatest impact on television because online technology can readily convey the same content All these changes have created a great deal more competition for viewers within the traditional TV marketplace The Internet has proven to be especially popular with young people who have adopted its applications to a far greater extent than their elders though even the latter have now begun to take up online activities in significant numbers Are these audiences the same Do people make a choice between these two media or do they use them both at different times and for different reasons Can

television utilise the Internet in profitable ways to enhance its market position Will television have to evolve from its current state to provide the kinds of content reception services to which people have become accustomed in the online world If it does need to change to survive will this nevertheless mean a radical new configuration of content and the disappearance of channels with fixed pre determined programme schedules Examines the implications of new interactive communications technologies for the way people will use television in the future Presents an analysis of changing styles of television viewing and changing orientations towards television Examines the growing importance of the broadband internet as a source of information and entertainment
