## Intestinal Stomas

An intestinal stoma is an artificial opening of the intestine, small or large, onto the abdominal wall to divert the faeces and flatus to the exterior, where they may be collected in a changeable bag. Common intestinal stomas are colostomy and ileostomy.

### COLOSTOMY

A colostomy is a surgical procedure where an artificial opening is constructed between a part of the colon and the anterior abdominal wall to allow the discharge of faeces.

- A colostomy is designed to be either temporary or permanent.
- Colostomy has no sphincteric control.

#### Types of colostomy

1. According to anatomic location
2. According to function
3. According to appearance
4. According to duration

#### According to anatomic location

- End sigmoid colostomy – Left iliac fossa
- End descending colon colostomy – Left iliac fossa
- Transverse colostomy – Above & right to the umbilicus
- Caecostomy – Right iliac fossa

The appropriate stoma site must be selected preoperatively for all the elective procedures and for most emergent operations.

#### According to function that the colostomy is intended for

- Diverting colostomy or defunctioning colostomy.
- Decompression colostomy

#### A. Diverting colostomy

Any colostomy may be regarded as 'Diverting' if it is so constructed that faeces are prevented from entering the diseased bowel distal to it. There are two types: temporary and permanent.

(a) *Temporary diverting colostomy*: Usually loop colostomy – the purpose is to provide temporary diversion of faeces for:

- (i) Protection of the complicated and threatened distal anastomosis e.g., following anterior resection for rectal cancer.
- (ii) Grossly infected diverticulitis with or without perforation.
- (iii) Traumatic injuries of the colon or rectum
- (iv) Multiple, complicated and high perianal fistulae.

Once the distal lesions are under control, the temporary colostomy is closed.

(b) *Temporary diverting end colostomy*: Hartmann's procedure.

(c) *Permanent diverting colostomy*: An end colostomy – the purpose is to provide permanent diversion of faeces for:
