[Medicine and Healing in the Ancient Mediterranean](#) D. Michaelides, 2014-05-30 There are many recoverable aspects and indications concerning medicine and healing in the ancient past from the archaeological evidence of skeletal remains grave goods comprising medical and or surgical equipment and visual representations in tombs and other monuments thorough to epigraphic and literary sources The 42 papers presented here cover many aspects medicine in the Mediterranean world during Antiquity and early Byzantine times bringing together both internationally established specialists on the history of medicine and researchers in the early stages of their career The contributions are grouped under a series of headings medicine and archaeology media online access to electronic corpus the Aegean medical authors schools of medicine surgery medicaments and cures skeletal remains new research in Cyprus Asklepios and incubation and Byzantine Arab and medieval sources These subject areas are addressed through a combination of wide ranging archaeological and osteological data and the examination and interpretation of philosophical literary and historiographical texts to provide a comprehensive suite of studies into early practices in this fundamental field of human experience

[Earth's Deep Water Cycle](#) Steven D. Jacobsen, Suzan van der Lee, 2006-01-10 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 168 The distribution of H₂O in the Earth is under debate Although liquid water covers 70% of the surface the oceans represent only about 0.025% of the planet's mass far less water than thought to have been present during Earth's formation If our planet is missing most of its original water could it reside in the mantle Can we detect it seismically Recognition of the capacity of some deep mantle minerals to absorb water has propelled an interdisciplinary field of research addressing these two questions and more Earth's Deep Water Cycle advances the field with experimental modeling and seismic studies that focus

on the physical characteristics of hydrated minerals the potentially H₂O rich transition zone 410 660 km depth and our detection abilities Integrated perspectives from four fields of research are featured Mineral physics and geochemistry Seismology and electrical conductivity Properties of deep hydrous mantle Global models and consequences of a deep Earth water cycle From experimental synthesis and physical properties measurements to geophysical observations and geodynamic modeling we are beginning to understand what parameters and data are needed to detect or refute the possibility of water in the deep Earth
