has defined news since at least the 1920s To make clear the degree to which these systems will transform news the author demonstrates how online resources can be used efficiently and inexpensively by generalists Practical issues of online use are presented within the context of both the parameters of contemporary journalism and the means by which these technologies address its limits Two separate chapters one describing search technologies and the other reviewing database organization will be of practical value to both neophyte and journeyman news and public information writers alike Using examples from his own and other s work Koch demonstrates ways to carry out simple and inexpensive searches His book will be especially important to the news or research librarian reporter and the public information or public relations writer The Routledge Companion to Digital Journalism Studies Scott A. The Rhetoric of Terrorism and Counterterrorism Richard Leeman, 1991-01-21 Using the responses of the Reagan and Nixon administrations to terrorism as case studies this treatise prescribes democratic rhetoric as the most strategic counterterrorist response available

The Cold War Guerrilla Elaine Windrich, 1992-01-30 This is the first book on U S policy in Angola during the 1980s Elaine Windrich shows how the Reagan administration and U S media inflated the importance of Jonas Savimbi and helped inflame the civil war in Angola Pinpointing media strengths and weaknesses in shaping and in reporting on a major crisis in Africa this ground breaking work analyzes Savimbi as a cold war guerrilla the role of different media segments in the dirty war in Angola and the right wing influence of the Reagan and Bush administrations into the 1990s This moving and well researched account providing insights into how the U S media covers African and Third World issues is a good text for foreign correspondents and for courses dealing with U S foreign policy journalism and communications and with Africa The image of the Angolan rebel leader as a freedom fighter is shown to be a product largely of the U S media and the collaboration of right wing lobby groups closely linked to the Reagan and Bush administrations The resurrection of Savimbi who represented a lost cause after his defeat in the Angolan civil war in 1976 but who was kept alive by South African support was due to his adoption by the Reagan administration as an ally in the crusade against Third World governments supported by the Soviet Union The study shows how the mainstream media tended to follow the administration s agenda and right wing views in portraying Savimbi as an ally Windrich also explains how the Bush administration and the media have continued to support Savimbi and his rebel movement

The Democracy Gap Jill Hills, S. Papathanassopoulos, 1991-07-30 This work examines the political choices that surround the new technologies of telecommunications and broadcasting and focuses on the essential issues of who determines how they are implemented and why as well as who benefits from them In its study of the distributional potential of these technologies the book concentrates on the political and economic interests that are in conflict over the possibilities and in particular on the ways in which the American and European governments have attempted to innovate organize and control information technology telecommunications and broadcasting The technological innovation backed by industrialized governments the authors contend has largely served political and military interests rather than those of the general population Written from the perspective of the individual citizen the book argues that the emphasis by governments on industrial leadership has preempted concern for access information and accountability Among the issues discussed are the impact that the globalization of industry is having on national sovereignty the evolution of three international trading blocs through the standardization of high definition television and digital networks the politics of cable and satellite transmission and the convergence of broadcasting and telecommunications This work offers a unique linkage between telecommunications broadcasting and information technology and it argues that governments have lost sight of the informational underpinnings

of the democratic process Students of politics international relations political economy and media studies will find this book to be an invaluable resource

Risky Business Lee Wilkins, Philip Patterson, 1991-03-30 The fifteen chapters in this volume deal with science medicine technology disaster and hazard coverage by the media from the perspectives of sociology psychology philosophy and journalism Written for the active reader who is concerned about the issues and willing to begin the work necessary to bring about change the volume suggests ways in which journalists policy makers and citizens can work to correct some of the more pervasive problems of media coverage of science In her foreword Dorothy Nelkin examines the images of science and technology that are conveyed through the media and discovers the dominant theme to be that of scientists as problem solvers authorities and the ultimate source of truth Scientists are seen as pursuing an arcane activity that is both above normal human understanding and beyond criticism Nelkin ends her overview by posing two questions that the succeeding chapters address Why is science writing so uncritical of science and why are scientists so critical of the press The goal of the first segment of the book is the recognition that media coverage of science follows certain predictable patterns and that those patterns will not change unless journalists critically examine their work The second half of the book looks at the decision making process involved in judgments about what and how to publicize and what to keep secret Three early chapters provide a critique of the concept of risk communication the one way transmission of information about various risks in the environment from the expert scientific community to the lay public Media performance is the subject of three chapters that explore research on a diversity of topics from the reporting of medicine and health to media coverage of disasters and natural disasters in both the United States and Japan The influence of individuals who serve as sources and the mandates of professional norms are revealed as the two major factors in science reporting The next two chapters address the issues of secrecy and disclosure focusing on airline and airport safety and media coverage of military science and technology Chapter nine tackles the problem of media coverage of organ donations and transplants Then using as a base an analysis of media coverage of the greenhouse effect in 1987 and 1988 editors Lee Wilkins and Philip Patterson explain when and how certain issues and events find a political symbol Chapter eleven Disasters and the Making of Political Careers offers both analysis of the politics of disaster and advice for journalists and politicians about how they can and cannot expect to cope with disastrous events In the final chapter Wilkins and Patterson address Nelkin s original questions These pages make important reading for journalists and other media specialists politicians policy makers and members of the scientific community This book is also an excellent choice for supplemental reading lists for courses in journalism and communications
