**Social Cognition and the Acquisition of Self** Michael Lewis,2012-12-06 It is always enlightening to inquire about the origins of a research endeavor or a particular theoretical approach Beginning with the observation of the mental life of the infant in 1962 Michael Lewis has contributed to the change in the view of the infant as an insensate mass of confusion to a complex and intellectual being Anyone fortunate enough to have participated in the infancy research of the 1960s knows how exciting it was to have discovered in this small creature such a full and complex organism More central to the origins of this work was the perception of the infant as an interactive not a reactive organism and as one who influenced its social environment and constructed its cognitive life not one who just passively received information Other areas of psychology had already begun to conceptualize the organism as active and interactive even while developmental psychologists still clung to either simple learning paradigms social reinforcement theories or reflexive theories Even though Piaget had proposed an elaborate interactive theory it was not until the late 1960s that his beliefs were fully implemented into developmental theory and practice A concurrent trend was the increase of concern with mother infant interactions Ainsworth 1969 Bowlby 1969 Goldberg Lewis Goldberg 1969 which provided the impetus for the study of social and emotional as well as cognitive development
