John Alcock

Sonoran Desert Summer:

Sonoran Desert Summer John Alcock, 1990-03-01 What could seem less inviting than summer in the desert For most people this prospect conjures up the image of relentless heat and parched earth for biologist John Alcock summer in Arizona's Sonoran Desert represents an opportunity to investigate the wide variety of life that flourishes in one of the most extreme environments in North America Only very special plants and animals can survive and reproduce in a place that may receive as little as six inches of rain in a year observes Alcock a place where the temperature may rise above one hundred degrees each day for months on end Yet he and other biologists have discovered here startling signs of life hidden in plain view under the summer sun male digger bees compete to reach virgins underground during the early summer mating season the round tailed ground squirrel goes about its business sounding alarm calls when danger threatens its kin the big jawed beetles *Dendrobias mandibularis* emerge in time to feast on saguaro fruits and to use their mandibles on rival males as well Harris hawks congregate in groups showing their affinity for polyandry and communal hunting robberflies mimic the appearance of the bees and wasps on which they prey and peccaries reveal the adaptation of their reproductive cycle to the desert's seasonal rains The book's 38 chapters introduce readers to these and other desert animals and plants tracing the course of the season through activities as vibrant as mating rituals and as subtle as the gradual deterioration of a fallen saguaro cactus Enhanced by the line drawings of Marilyn Hoff Stewart *Sonoran Desert Summer* is both an account of how modern biology operates and a celebration of the beauty and diversity that can be found in even the most unpromising places

When the Rains Come John Alcock, 2009-04-17 Life in the desert is a waiting game waiting for rain And in a year of drought the stakes are especially high John Alcock knows the Sonoran Desert better than just about anyone else and in this book he tracks the changes he observes in plant and animal life over the course of a drought year Combining scientific knowledge with years of exploring the desert he describes the variety of ways in which the wait for rain takes place and what happens when it finally comes The desert is a land of five seasons featuring two summers hot dry months followed by monsoon and Alcock looks at the changes that take place in an entire desert community over the course of all five He describes what he finds on hikes in the Urey Mountains near Phoenix where he has studied desert life over three decades and where frequent visits have enabled him to notice effects of seasonal variation that might escape a casual glance Blending a personal perspective with field observation Alcock shows how desert ecology depends entirely on rainfall He touches on a wide range of topics concerning the desert's natural history noting the response of saguaro flowers to heat and the habits of predators whether soaring red tailed hawk or tiny horned lizard He also describes unusual aspects of insects that few desert hikers will have noticed such as the disruptive color pattern of certain grasshoppers that is more effective than most camouflage *When the Rains Come* is brimming with new insights into the desert from the mating behaviors of insects to urban sprawl and features photographs that document changes in the landscape as drought years come and go It brings us the desert in the harshest of

times and shows that it is still teeming with life *Revised and Updated Edition* Steven J. Phillips, Patricia Wentworth Comus, 2000 A Natural History of the Sonoran Desert provides the most complete collection of Sonoran Desert natural history information ever compiled and is a perfect introduction to this biologically rich desert of North America BOOK

JACKET Physiological Ecology of North American Desert Plants Stanley D. Smith, Russell Monson, Jay E.

Anderson, 2012-12-06 This book begins with the physical and biological characterization of the four North American deserts and a description of the primary adaptations of plants to environmental stress In the following chapters the authors present case studies of key species representing dominant growth forms of the North American deserts and provide an up to date and comprehensive review of the major patterns of adaptations in desert plants One chapter is devoted to several important exotic plants that have invaded North American deserts The book ends with a synthesis of the adaptations and resource requirements of North American desert plants Further it addresses how desert plants may respond to global climate change

Desert Biomes Joyce A. Quinn, 2008-12-30 This volume in the Greenwood Guides to Biomes of the World focuses on deserts the seemingly desolate but actually quite lively regions that are home to some of the most interesting and beautiful flora and fauna in the world Desert Biomes examines three different types of biomes warm hot deserts such as the Mojave and Sahara deserts cold deserts such as Patagonia in South America and the West Coast Fog Desert biomes which occur on certain regions of the western edge of major continents The volumes examines how these biomes are unique in terms of their vegetation geographical distribution soil challenges posed by the environment adaptation of the plants and animals to the environment and conservation efforts Maps photos diagrams drawings and tables accompany the text as do sidebars that highlight habitats species and ecological relationships The volume includes a bibliography of accessible resources for further research **Sonoran Desert Spring** John Alcock, 1985 Deserts and Desert Environments Julie J Laity, 2009-01-28

Taking a global perspective this book provides a concise overview of drylands including their physical biological temporal and human components Examines the physical systems occurring in desert environments including climate hydrology past and present lakes weathering hillslopes geomorphic surfaces water as a geomorphic agent and aeolian processes Offers an accessible introduction to the physical biological temporal and human components of drylands Investigates the nature environmental requirements and essential geomorphic roles of plants and animals in this stressful biological environment Highlights the impact of human population growth on climate desertification water resources and dust storm activity

Includes an examination of surface atmosphere interactions and the impact of ENSO events Packrat Middens Julio L.

Betancourt, Thomas R. Van Devender, Paul S. Martin, 2021-11-16 Over the past thirty years late Quaternary environments in the arid interior of western North America have been revealed by a unique source of fossils well preserved fragments of plants and animals accumulated locally by packrats and quite often encased amberlike in large masses of crystallized urine These packrat middens are ubiquitous in caves and rock crevices throughout the arid West where they can lie preserved for

tens of thousands of years More than a thousand of these deposits have been dated and analyzed and middens have supplanted pollen records as a touchstone for studying vegetation dynamics and climatic change in radiocarbon time the last 40 000 years Now similar deposits made by other mammals like hyraxes are being reported from other parts of the world This book brings together the findings and views of many of the researchers investigating fossil middens in the United States Mexico Africa the Middle East and Australia The contributions serve to open a forum for methodological concerns update the fossil record of various geographic regions introduce new applications and display the vast potential for fossil midden analysis in arid regions worldwide The findings presented here will serve to foster regional research and to promote general studies devoted to global climate change Included in the text are more than two hundred charts photographs and maps

Venomous Reptiles of the United States, Canada, and Northern Mexico Carl H. Ernst, Evelyn M. Ernst, 2011 The first volume contains species accounts of the venomous lizards and elapid and viperid snakes found north of Mexico's twenty fifth parallel Volume two covers the twenty one species of rattlesnakes found in the United States Canada and northern Mexico

Ecological Systems of the Geobiosphere Heinrich Walter, Siegmund W. Breckle, 2013-06-29 In Volume 1 of this four volume series ecological problems of a general nature were discussed from a global point of view Familiarity with this is essential for a full understanding of the more specialized treatment in this and subsequent volumes for no similar approach is to be found in other ecological handbooks for beginners This present volume deals in detail with the special ecological relationships of the tropical and subtropical zoniobiomes I to III Most ecologists proceed from the basis of their experience in the temperate zones of the northern hemisphere As a result many ecological writings show a certain one sidedness and there is a danger that generalizations made will not be broadly applicable To avoid this particular emphasis is laid in this volume on the special ecological features and the characteristics of the tropical and subtropical regions More specifically we deal not only with the relationship of the euclimatope to zonal soils and zonal vegetation but also pay attention to azonal conditions shown in pedobiomes and in the altitudinal belts of mountains the orobiomes In this and the subsequent volumes the same simple scheme is followed in treating each zoniobiome 1 climate 2 soils 3 producers 4 consumers 5 decomposers 6 ecosystems 7 subdivision into biomes 8 orobiomes 9 pedobiomes and 10 zonoecotones Where it has appeared expedient however we have occasionally deviated from this scheme see Deserts D F G and H

The Mountains Next Door Janice Emily Bowers, 2015-11-01 The Rincon Mountains east of Tucson are a small and seemingly undistinguished range rounded and arid they are more a site for foothill walks than serious exploring Yet upon close inspection these unassuming mountains disclose many wonders and curiosities as Janice Emily Bowers discovered while conducting a botanical study there Over the course of two years she made thirty eight excursions into the Rincos some for two or three days at a time and garnered not only plant specimens but thoughts along the way The Mountains Next Door is the first book to describe and celebrate the natural history of these mountains that even longtime Arizonans may often take for granted I watched the seasons march

through the canyons writes Bowers followed the wildflower parade from February through November and throughout it all realized that I could travel in the Rincon Mountains forever and never learn all they contained It is also a book of meditations as Bowers reflects upon the meaning of nature the similarities between the scientific and creative processes the value of wilderness in the face of urban encroachment and other ideas Participating in the long tradition of reflective natural history writing she has produced a memorable book that depicts the delights and dilemmas of field botany as it explores the perennial struggle between science and mysticism that tugs at every naturalist's heart

Abbey in America John

A. Murray, 2015-05-15 More than twenty five years after his death iconic writer and nature activist Edward Abbey 1929 1989 remains an influential presence in the American environmental movement Abbey's best known works continue to be widely read and inspire discourse on the key issues facing contemporary American society particularly with respect to urbanization and technology Abbey in America published forty years after Abbey's popular novel The Monkey Wrench Gang features an all star list of contributors including journalists authors scholars and two of Abbey's best friends as they explore Abbey's ideas and legacy through their unique literary personal and scholarly perspectives **Desert Meteorology** Thomas T.

Warner, 2009-01-18 Aridity prevails over more than one third of the land area of the Earth and over a significant fraction of the oceans as well Yet to date there has been no comprehensive reference volume or textbook dealing with the weather processes that define the character of desert areas Desert Meteorology fills this gap by treating all aspects of desert weather such as large scale and local scale causes of aridity precipitation characteristics in deserts dust storms floods climate change in deserts precipitation processes desertification land surface physics of deserts numerical modelling of desert atmospheres and the effect of desert weather on humans A summary is provided of the climates and surface properties of the desert areas of the world The book is written with the assumption that the reader has only a basic knowledge of meteorology physics and calculus making it useful to those in a wide range of disciplines It includes review questions and problems for the student This comprehensive volume will satisfy all who need to know more about the weather and climate of arid lands It will appeal especially to advanced students and researchers in environmental science meteorology physical geography hydrology and engineering A Biogeographical Analysis of the Chihuahuan Desert through its Herpetofauna D.J. Morafka, 2012-12-06 The

Mexican Plateau in its magnificent dimensions and material wealth stood among the first and perhaps most alluring discoveries of European explorers Buried deeper in the verbal histories of a now vanquished people the American Indians must be the primordial human awareness of the inverted complex triangle that dominates the Mexican topography climate and biota It always has been viewed by man as a source of wealth and a center of authority The plateau is the pillar upon which all Mexican conquerors have erected their capitols tilled their crops and mined for their treasure and from which they dispersed the forces of their authority Ironically the same size and diversity that give the plateau its value also make it an immense barrier Its broad desert and three to five thousand meter high crests constitute severe obstacles in the path of North American man What has just been said of mankind in general can be applied to the biologist in particular He too has termed the goliath southern plateau as the crucible of the arid biotas of the continent i.e. Madre Tertiary The biologist found the plateau to be a region of tremendous richness and diversity But he also has been inhibited both physically and intellectually by its high mountain and vast desert barriers
