Office of Marine Pollution Assessment,1982 Birds of Essex Simon Wood,2009-01-01 The County Avifaunas are a growing series giving full details of the status and range of every species recorded in the county in question Each title covers all species on the county list with a detailed breakdown of rarity records

and each has introductory sections describing the county's general ecology, climate, weather patterns, its ornithological history and conservation record. Essex is of national and international importance to many migrating and wintering wildfowl and waders which can be found on the estuaries. Further inland the Lea Valley harbours important populations of several species within the complex of reservoirs and gravel pits. Elsewhere the diverse habits of woodland and parkland, heaths and commons, agricultural land and urban areas mean that at all times of year there is the opportunity to see upwards of 100 species in a day with little effort. This book analyses and summarises all the data collated and documented over the last 200 years and includes available records to the end of 2004. Introductory chapters discuss the geology and habitats of Essex and the amazing fossil bird record. The individual accounts provide an up to date status of each species and patterns of occurrence within Essex. A distribution map is included for most breeding species. A breakdown and analysis are provided for all county rarities. Superb line drawings and photographs illustrate the book, all by talented local artists and photographers. This book is an essential reference for anybody who has watched birds in this amazing county. *Atlantic Seabirds*, 1999

Media Psychology David Giles, 2003-04-02 This text tackles the traditional topics of media psychology: sex, violence, advertising, along with developmental aspects of media influence and the psychology of the audience. It examines specific media genres: news, sports, soaps, audience participation, media, the internet and asks what light psychology can shed on the popularity of these genres and the response of their audiences. Holocene Extinctions Samuel T. Turvey, 2009-05-28 The extent to which human activity has influenced species extinctions during the recent prehistoric past remains controversial due to other factors such as climatic fluctuations and a general lack of data. However the Holocene, the geological interval spanning the last 11 500 years from the end of the last glaciation, has witnessed massive levels of extinctions that have continued into the modern historical era but in a context of only relatively minor climatic fluctuations. This makes a detailed consideration of these extinctions a useful system for investigating the impacts of human activity over time. *Holocene Extinctions* describes and analyses the range of global extinction events which have occurred during this key time period as well as their relationship to both earlier and ongoing species losses. By integrating information from fields as diverse as zoology, ecology, palaeontology, archaeology and geography and by incorporating data from a broad range of taxonomic groups and ecosystems, this novel text provides a fascinating insight into human impacts on global extinction rates both past and present. This truly interdisciplinary book is suitable for both graduate students and researchers in these varied fields. It will also be of value and use to policy makers and conservation professionals since it provides valuable guidance on how to apply lessons from the past to prevent future biodiversity loss and inform modern conservation planning. **Annual Review of Phytopathology** Robert K. Webster, 1997-09 **Programmatic Supplemental EIS for Alaska Groundfish Fisheries Implemented Under the Authority of the Fishery Management Plans for the Groundfish Fishery of the Gulf of Alaska and the Groundfish of the Bering Sea and Aleutian Islands Area**, 2004
