ПРЕДИСЛОВИЕ

Постоянное внимание партии и правительства к сыродельной отрасли промышленности, считающейся одной из основных продуктов питания, позволяет непрерывно совершенствовать технологию сыров и развивать сыродельную базу сыроделия в стране. В результате за короткий исторический период Советский Союз вышел на производственную высоту второго места в мире.

Продовольственная программа СССР, которая занимает центральное место в планах развития страны, предусматривает и в дальнейшем ускоренное развитие сыродельной промышленности.

Сыроделие возникло, как только человек научился доить домашних животных. В оставшейся, большей части молока по окончании бактериальной фазы происходило спонтанное сквашивание и ферментация составных частей его молочнокислыми микроорганизмами. Образовавшийся створок сквашивался и отделялся от сыворотки. Сливки сыворотку, человек получал простейший сыр. Слово курт, которое использовалось, очевидно, для обозначения этого сыра, можно встретить в различных языках.

Никогда раньше, молочнокислые сытаны, что получение молока, а следовательно, и его простейшая переработка на сыр были известны человеку 6,5—5 тысяч лет до н. э. С тех пор, с каждым истечением столетия сыры получали все большее распространение, рассматривались как один из важнейших продуктов питания и применялись во всех южных районах и уездах земного шара. До XIX в. сыроделие почти целиком зависело от местных условий. Состав коровь и породы домашних животных обуславливали свойства, биологический и микробиологический состав молочного сыра, а климатические условия и традиции в технологии определяли, какими будут сыры, изготовленные в конкретной местности. Так появились и сохранили свои отличительные признаки сыры швейцарский, голландский, французский, датский, русский, польский, немецкий, итальянский, испанский, шведский, греческий, чешский и многие другие.

В прошлом столетия сыроделие стало терять локальный характер. Эксперты выявили важность прежде всего необходимость искусственного культивирования смеси молочнокислых микроорганизмов определенного состава, а также выбора молочного сыра с определенными свойствами и составом.

В XX в. появилась возможность управлять процессами получения молока с помощью биологических и технологических возбудителей, выращивать и контролировать специально бактериальные закваски, осуществлять разнообразные физико-химические и биологические процессы обработки сыра, а также производить продукты. В результате появилось большое количество видов различных сыров. В настоящее время ассортимент сыров, насчитывающий более 500 наименований, продолжает увеличиваться.

Известное внимание потребителей к сыру можно объяснить его высокой биологической ценностью, широким гаммой вкусовых оттенков и способностью длительно храниться. Следует отметить, что в последние десятилетия получил широкое подтверждение тот факт, что образующиеся при сыроделии сыры содержат вещества из аминокислот — аминокислоты — имеют такую же биологическую активность, как аминокислоты в порохе.

Наряду с сыром огромную популярность у населения находят творог и сыровый-творожный изделия. Производство их составляет около трети тонн и может рассматриваться вместе с выпуском кисломолочных продуктов как мощный стимулирующий фактор сохранения и улучшения здоровья трудящихся страны.
