Rosato, 2013-04-18 For some time there has been a strong need in the plastic and related industries for a detailed practical book on designing with plastics and composites reinforced plastics This one source book meets this criterion by clearly explaining all aspects of designing with plastics as can be seen from the Table of Contents and Index It provides information on what is ahead as well as today s technology It explains how to interrelate the process of meeting design performance requirements with that of selecting the proper plastic and manufacturing process to make a product at the lowest cost This book has been prepared with an awareness that its usefulness will depend greatly upon its simplicity The overall guiding

premise has therefore been to provide all essential information Each chapter is organized to best present a methodology for designing with plastics and composites of industrial designers whether in engineering This book will prove useful to all types or involved in products molds dies or equipment and to people in new product ventures research and development marketing purchasing and management who are involved with such different products as appliances the building industry autos boats electronics furniture medical recreation space vehicles and others In this handbook the basic essentials of the properties and processing behaviors of plastics are presented in a single source intended to be one the user will want to keep within easy reach

Stress Concentrations in Laminated Composites Seng C. Tan, 2017-10-19 From the Author's Preface The objective of this book is to provide a thorough and systematic study of the problem of laminated composites containing stress concentrations

concentrations are introduced in laminated plates in the forms of circular holes elliptical openings and straight cracks These forms of cutouts have many practical applications and are familiar to most engineers Stress concentrations exist in all known structural components Stress concentrations have great practical importance because they are normally the cause of failure In addition to stress analyses of laminated composites we need more fundamental understanding of the failure mode the failure criterion the effects on global laminate response and the design of composites in the presence of stress concentrations In this book all the subjects studied are closely related to the problem of stress concentrations in laminated composites All the models are verified with many experimental results The underlying objective of this comprehensive study is to give the readers an in depth and thorough understanding of the problem of stress concentrations in composites This book is the first to address the problem of laminated composites containing stress concentrations in a systematic way
