Testicular Cancer and Other Tumors of the Genitourinary Tract M. Pavone-MacAluso, 2013-11-27 The proceedings of this volume represent a record of a meeting in the Ettore Majorana center in Erice Sicily from 16-24 July 1983 This was the fifth course of the International School of Urology and Nephrology the fourth in a series of meetings devoted to different aspects of Urological Oncology Speakers and delegates came from nearly every part of the world and contributed to a detailed analysis of the current state of knowledge of tumors of the testicle and to the development of knowledge of cancer of the bladder prostate and kidney Previous volumes resulting from this series of meetings have been well received and the Editors hope that the reader may find the record of this meeting equally attractive We are indebted to the Department of Medical Illustration St James's University Hospital for their kindness in producing several of the illustrations in this book The editors are very grateful to Dr Cavallo of Palermo for the major part which he has played in preparing the index M Pavone Macaluso P H Smith M A Bagshaw v CONTENTS I TUMORS OF THE TESTIS CLASSIFICATION PATHOLOGY AETIOLOGY RESEARCH Pre treatment Classification of Tumors of the Testis 1 G Pizzocaro A Milani and M Pasi Histopathological Classification of Testicular Tumors 9 F Mostofi and I A Sesterhenn Rare Tumors of Testes and Adnexal Tumors 29 F Mostofi and C J Davis Jr

Tumors of the Testis and Adjacent Structures Thomas M. Ulbright, Robert H. Young, American Registry of Pathology, 2013 Provides a comprehensive guide to clinical pathologic immunohistochemical molecular biologic prognostic and to a limited extent therapeutic aspects of the various entities The author have expanded coverage of the immunohistochemical and molecular features of the various lesions Highly illustrated mainly in colour **Testicular Cancer, An Issue of Urologic Clinics** Daniel W. Lin, 2015-07-29 This issue provides much needed updates since Dr Sheinfeld's issue published in 2007 Dr Lin has assembled expert authors to provide clinicians with the full breadth of clinical updates on testicular cancer New to this issue are articles on clinical outcomes survivorship and several articles on the management of Nonseminomatous Germ Cell Tumors *Carcinoma of the Kidney and Testis, and Rare Urologic Malignancies* Zbigniew Petrovich, Luc Baert, Luther W. Brady, 2013-11-11 In the United States in 1997 28800 new cases of malignant tumors of the kidney and renal pelvis were diagnosed along with 2100 new cases of malignant tumors of the ureter and other urinary organs 7200 primary malignant tumors of the testis and 1300 primary malignant tumors of the penis and other genital organs In large measure surgery is the treatment of choice for these tumors but radiation therapy is increasingly recognized as having significant and important curative and palliative benefits in each of these tumor sites Surgery is the standard form of treatment for non metastatic renal cell carcinomas as well as for malignancies of the renal pelvis and ureter with radical nephrectomy and radical uretectomy being employed However postoperative radiation therapy is of value for those patients who demonstrate evidence of residual tumor following surgery transection of tumor during surgery or positive regional lymph node drainage As regards the rare tumors that involve the female urethra surgical

resection is appropriate for those that are limited and local in character and amenable to partial ureterectomy. With tumors that are more advanced in character, however, local recurrence and lymphatic dissemination are significant problems, and treatment by radiation therapy programs alone yields satisfactory control rates as well as limited recurrences and long-term survivors. For primary tumors involving the testis, the major approach to nonseminomatous tumors is surgical resection with postsurgical systemic chemotherapy.

Porth's Pathophysiology Tommie L. Norris, 2023-12-20. Trusted for more than 40 years and updated to reflect today's nursing challenges, Porth's Pathophysiology: Concepts of Altered Health States, 11th Edition, continues a legacy of excellence with a comprehensive nursing-focused approach that instills a mastery of both the physical and psychological aspects of altered health. More approachable and inclusive than ever, this unique text clarifies complex ideas through diverse perspectives, the latest evidence-based information, and engaging in-text features and application exercises.

Testis cancer: genes, environment, hormones Alberto Ferlin, Carlo Foresta, 2015-10-29. Testicular cancer (TC) is the most common cancer in males aged 20–40 years, with a worldwide incidence of 7.5 per 100,000, but the rates vary considerably between countries and ethnic groups, and there is evidence also for an increasing incidence in last decades. About 95% of all TCs are represented by testicular germ cell tumors (TGCTs), which include seminoma and non-seminoma histological types. It is generally assumed that the development of TGCT is under endocrine control. In particular, unbalanced androgen/estrogen levels and/or activity are believed to represent the key events for TGCT development and progression. Furthermore, recent evidence has suggested genetic association of TGCT with variations in genes involved in the hypothalamic-pituitary-testicular axis and steroidogenic enzymes. This recent evidence expands the current knowledge on the role of genetic contribution in testicular cancer susceptibility and supports the hypothesis that variations in hormone metabolism genes might change the hormonal environment implicated in testicular carcinogenesis. Therefore, hormonal carcinogenesis is an important and controversial area of current research in TGCT, and further attention is given to genetic factors influencing hormone-related cancer risk. The genetic component to TGCT is in general strong. In fact, although environmental factors clearly contribute to TGCT development and probably to its increasing incidence in some geographical areas, the proportion of TGCT susceptibility accounted for by the genetic effects is estimated at 25%. TGCT has high familial risks compared with most other cancer types that are generally no more than two-fold. Brothers of individuals with TGCT have an 8 to 12-fold increased risk of disease, and sons of affected individuals have a 4 to 6-fold increased risk. Despite this strong familial relative risk, early results from linkage studies identified a limited relationship with genetic factors, suggesting that TGCT is a genetically complex trait. However, more recently, four genome-wide association studies (GWAS) from the UK and USA have reported association of TGCTs with six new loci: KITLG, SPRY4, BAK1, DMRT1, TERT, and ATF7IP. The strongest association for TGCT susceptibility was found for SNPs in KITLG, ligand for the membrane-bound receptor tyrosine kinase KIT gene, with a greater than 2.5-fold increased risk of disease per major allele, which is the highest reported for any cancer to date. These

studies are being now replicated by other researches and attention is given to the relationship between these genetic variations TGCT risk and frequently associated anomalies of the reproductive tract such as cryptorchidism and infertility Finally over the past few decades TCGT research has focused also on external environmental causes acting mainly as endocrine disruptors of androgen and oestrogen pathways even during the foetal development of the testis It is well known that the testicular dysgenesis syndrome TDS hypothesis proposed ten years ago suggests that disturbed testicular development in fetal life may result in one or more of four disorders postnatally named cryptorchidism hypospadias poor semen quality and TGCT These four disorders are therefore considered as one clinical entity and are linked together by epidemiological and pathophysiological relations The relative contribution of genetics and environment in TGCT development and the interactions between endocrine disruptors and variations in genes involved in hormonal carcinogenesis is therefore another interesting area of research
