Testing Of Metallic And Inorganic Coatings:

Testing of Metallic and Inorganic Coatings William B. Harding, 1987 Coatings are tested to confirm compliance with specifications to monitor the operation of a coating process and to evaluate coatings for various services The ability of a coating to perform as intended usually depends on several characteristics and the testing of a coating usually involves several different tests At first glance the nature of a characteristic that is being tested may seem clear and the results of a test may seem to be unambiguous however the nature of a characteristic may be more complex than realized and the ability of a test to measure the characteristic may be less than expected The members of the ASTM Committee B 8 on Metallic and Inorganic Coatings felt it was desirable to organize a symposium on the testing of the metallic and inorganic coatings so as to bring these problems to the attention of practitioners This publication is based on the symposium which was presented in Chicago on April 14 and 15 1986 *Methods for Corrosion Testing of Metallic and Other Inorganic Coatings on Metallic Substrates. Corrosion Testing of Materials with Metallic and Inorganic Coatings SW. Dean, 1987 Corrosion resistance is an important characteristic of many types of metallic and inorganic coating systems Corrosion resistance of coatings usually involves appearance maintenance as well as protection from structural damage Corrosion tests have been an important approach for evaluating the type and extent of damage that occurs to coated products Corrosion tests have been used both to assure the quality and performance of coated parts and to simulate the degree of degradation that occurs to components when exposed to specific atmospheric conditions for an extended time The standard tests that have been developed for both of these purposes are described and some of the problems with the testing approach are reviewed In particular the problem of simulating and accelerating atmospheric corrosion in a laboratory environment is highlighted Some of the newer approaches to corrosion testing using electrochemical techniques are discussed These approaches may have merit but many problems remain to be solved

Corrosion Tests and Standards Robert Baboian, 2005 Introduction to Tribology Bharat Bhushan, 2013-02-14 A fully updated version of the popular Introduction to Tribology the second edition of this leading tribology text introduces the major developments in the understanding and interpretation of friction wear and lubrication Considerations of friction and wear have been fully revised to include recent analysis and data work and friction mechanisms have been reappraised in light of current developments In this edition the breakthroughs in tribology at the nano and micro level as well as recent

developments in nanotechnology and magnetic storage technologies are introduced A new chapter on the emerging field of green tribology and biomimetics is included Introduces the topic of tribology from a mechanical engineering mechanics and materials science points of view Newly updated chapter covers both the underlying theory and the current applications of tribology to industry Updated write up on nanotribology and nanotechnology and introduction of a new chapter on green tribology and biomimetics

Experimental Methods in Tribology Gwidon Stachowiak, Andrew W Batchelor, 2004-05-18 This is an indispensable guide to both researchers in academia and industry who wish to perform tribological experiments more effectively With an extensive range of illustrations which communicate the basic concepts in experimental methods tribology more effectively than text alone An extensive citation list is also provided at the end of each chapter facilitating a more thorough navigation through a particular subject Contains extensive illustrations Highlights limitations of current techniques

Tribology and Mechanics of Magnetic Storage Devices Bharat Bhushan, 2012-12-06 Magnetic recording is presently a 50 billion industry It spans audio video and digital applications in the form of tapes and disks The industry is expected to grow by a factor of five or more in the next decade This growth will be accompanied by dramatic improvements in the technology and the potential exists for magnetic recording densities to improve by at least one order of magnitude Magnetic recording process is accomplished by relative motion between a magnetic head and a magnetic medium Types of magnetic media for digital recording are flexible media tapes and floppy disks and rigid disks Physical contact between head and medium occurs during starts and stops and hydrodynamic air film develops at high speeds Flying heights mean separation between head and medium are on the order of 0.1 micrometer comparable to surface roughness of the mating members Need for higher and higher recording densities requires that surfaces be as smooth as possible and flying heights be as low as possible Smoother surfaces lead to increased static kinetic friction and wear In the case of magnetic tapes in order to have high bit capacity for a given size of a spool we like to use as thin a tape substrate as possible Thinner tapes are prone to local or bulk viscoelastic deformation during storage This may lead to variations in head tape separations resulting in problems in data reliability

Handbook of Physical Vapor Deposition (PVD) Processing D. M. Mattox, 2014-09-19 This book covers all aspects of physical vapor deposition PVD process technology from the characterizing and preparing the substrate material through deposition processing and film characterization to post deposition processing The emphasis of the book is on the aspects of the process flow that are critical to economical deposition of films that can meet the required performance specifications The book covers subjects seldom treated in the literature substrate characterization adhesion cleaning and the processing The book also covers the widely discussed subjects of vacuum technology and the fundamentals of individual deposition processes However the author uniquely relates these topics to the practical issues that arise in PVD processing such as contamination control and film growth effects which are also rarely discussed in the literature In bringing these subjects together in one

book the reader can understand the interrelationship between various aspects of the film deposition processing and the resulting film properties The author draws upon his long experience with developing PVD processes and troubleshooting the processes in the manufacturing environment to provide useful hints for not only avoiding problems but also for solving problems when they arise He uses actual experiences called war stories to emphasize certain points Special formatting of the text allows a reader who is already knowledgeable in the subject to scan through a section and find discussions that are of particular interest The author has tried to make the subject index as useful as possible so that the reader can rapidly go to sections of particular interest Extensive references allow the reader to pursue subjects in greater detail if desired The book is intended to be both an introduction for those who are new to the field and a valuable resource to those already in the field The discussion of transferring technology between R D and manufacturing provided in Appendix 1 will be of special interest to the manager or engineer responsible for moving a PVD product and process from R D into production Appendix 2 has an extensive listing of periodical publications and professional societies that relate to PVD processing The extensive Glossary of Terms and Acronyms provided in Appendix 3 will be of particular use to students and to those not fully conversant with the terminology of PVD processing or with the English language Information Sources in Metallic Materials M. Materials Degradation and Its Control by Surface Engineering Andrew W. Batchelor,Loh Nee Lam,Margam Chandrasekaran,2011 This book provides a general holistic view of materials degradation without undue emphasis on aqueous corrosion with the neglect of other important topics such as liquid metal corrosion Discussion of materials degradation is balanced by detailed description and evaluation of surface engineering as a means of managing materials degradation Thus the trainee engineer is presented with a comprehensive view of the problem rather than just a part of the problem The control or management of materials degradation is not only discussed in scientific terms but the economics or financial aspects of materials degradation and surface engineering is also discussed in detail with the help of analytical models
