Huh,2021-10-22 This easy to use handbook is designed to assist in the evaluation and management of spinal cord injuries and the diverse related disorders and conditions Spinal cord injuries can cause abnormalities in all body systems due to dysfunction of the somatic motor and sensory systems and damage to the autonomic nerve system The latter gives rise to respiratory and cardiac problems temperature regulation disorders endocrine system disorders and many associated metabolic disorders Other potential consequences of spinal cord injuries include pressure injuries and various disabilities and obstacles ranging from physical limitations to social embarrassment This handbook offers extensive guidance on medical management in different scenarios from the acute phase to long term care with a particular focus on information of importance for the solution of clinical problems commonly encountered in daily practice It will be ideal for practitioners in rehabilitation medicine neurosurgery orthopedics neurology and other relevant specialties that deal with patients with spinal cord injuries **Handbook of Neurological Rehabilitation** Richard J. Greenwood,Thomas M. McMillan,Michael P.

Barnes,Christopher D. Ward,2005-08-16 Changes in the focus of neurological practice worldwide have led to the need for new standard texts that reflect the current state of this expanding area of clinical expertise The second edition of the Handbook of Neurological Rehabilitation is a major reference source that fulfils this need providing an invaluable resource for all professions that work with patients suffering from neurological disorders It brings restorative neurology to the bedside

and shows how a reiterative goal oriented problem solving training programme can benefit patients sometimes on a scale not achieved by pharmacological or surgical interventions The book is divided into three sections all of which have been updated Section One explores the clinical and biological principles underpinning rehabilitation practice in the context of neurological disablement Section Two describes the assessment treatment and management of the major physical cognitive and behavioural impairments and the resulting functional deficits that may follow or accompany neurological disease The final section explores in more detail these problems and their management in relation to the more common specific disorders of the nervous system The text emphasises the fact that rehabilitation is an ongoing process involving multidisciplinary problem solving goal setting and education in which organised care is more effective than unorganised care and the breakdown of professional barriers within rehabilitation to facilitate the use of combined treatment techniques improves outcome It describes the contribution made by neural reorganisation and compensatory mechanisms to recovery of function focuses on the avoidance of secondary deficit and explores the physical cognitive affective and behavioural problems that may occur after neurological damage At a time when new medical technologies threaten to fragment the integrity of medical care at individual and societal levels it is crucial that all those involved in the management of chronic neurological disease have a working knowledge of the contents of this book Their perspective on clinical practice will then be truly integrated and holistic and their patients will benefit accordingly

Management and Rehabilitation of Spinal Cord Injuries

Hyun-Yoon Ko, 2022-05-17 This comprehensive up to date guide to the rehabilitation care of persons with spinal cord injuries and disorders draws on the ever expanding scientific and clinical evidence base to provide clinicians with the knowledge needed in order to make optimal management decisions during the acute subacute and chronic phases The second edition reorganized contents as more clinically practical use consisting of 48 chapters Also new chapters such as kinesiology and kinematics of functional anatomy of the extremities are added as well Readers will also find chapters on the basics of functional anatomy neurological classification and evaluation injuries specifically in children and the elderly and psychological issues The book will be an invaluable aid to assessment and medical care for physicians and other professional personnel in multiple specialties including physiatrists neurosurgeons orthopedic surgeons internists critical care physicians urologists neurologists psychologists and social workers
