**Native Host Plants for Texas Butterflies** Jim Weber, Lynne M. Weber, Roland H. Wauer, 2018-08-01 While many growers focus on attracting adult butterflies to their gardens fewer know about the plants that caterpillars need to survive

Native host plants wildflowers trees shrubs vines grasses and sedges not only provide a site for the butterfly to lay its eggs they also provide a ready food source for the emerging caterpillar Think of these plants as the nurseries of the garden This user friendly heavily illustrated field guide describes 101 native larval host plants in Texas Each species account includes descriptive information on each plant a distribution map and photos of both the caterpillars and adult butterflies who frequent those plants An adult butterfly may nectar on a wide variety of flowers but caterpillars are much more restricted in their food sources Some feed on only a limited number of plant species so female butterflies seek out these specific plants to lay their eggs For example the host plants for Monarch caterpillars are various species of milkweed Often these plants are not the same as the ones the adult butterfly will later use for nectar Learning more about the plants caterpillars need is crucial for butterfly conservation Butterflies dependency on specific caterpillar host plants is one of the key factors restricting their range and distribution Armed with this knowledge readers can also hone their ability to find specific species of breeding butterflies in nature This is a handy guide whether you are in the field searching for butterflies or on the hunt for butterfly friendly options at your local plant sale

Native Host Plants for Texas Moths Lynne M. Weber, Jim Weber, 2022-08-24 While day flying butterflies have long captured the attention of nature enthusiasts moth species outnumber butterfly species by about fifteen to one with many being overlooked due to their mostly nocturnal habits Although they are far less noticeable to us moths are essential to many other species including the plants they pollinate and the animals they nourish In their caterpillar or larval form they provide a primary source of sustenance for birds and as adults they feed everything from tiny bats to large mammals Native plants are of utmost importance for moths as they evolved alongside them and they are the principal factor for dictating moth species range and distribution Like butterflies moths require native plant species they recognize in order to lay their eggs This user friendly heavily illustrated follow up to Lynne and Jim Weber s highly successful Native Host Plants for Texas Butterflies describes over 100 native larval host plants for moths in Texas More than 150 moth species are illustrated in the book both larval and adult phases with one to two species for each of the larval host plants Today there are about 4 700 species of moths recognized in Texas with new species and their host plant associations still being discovered Native Host Plants for Texas Moths will prove to be an informative introduction to this less widely known world of moths and their host plants providing a better understanding of how to discover support and protect these important insects
