Text Mining Methods For Analysing Unstructured Information:

Text Mining Sholom M. Weiss, Nitin Indurkha, Tong Zhang, Fred Damerau, 2010-01-08 Data mining is a mature technology. The prediction problem looking for predictive patterns in data has been widely studied. Strong methods are available to the practitioner. These methods process structured numerical information where uniform measurements are taken over a sample of data. Text is often described as unstructured information. So it would seem text and numerical data are different requiring different methods. Or are they? In our view a prediction problem can be solved by the same methods whether the data are structured numerical measurements or unstructured text. Text and documents can be transformed into measured values such as the presence or absence of words and the same methods that have proven successful for predictive data mining can be applied to text. Yet there are key differences. Evaluation techniques must be adapted to the chronological order of publication and to alternative measures of error. Because the data are documents more specialized analytical methods may be preferred for text. Moreover the methods must be modified to accommodate very high dimensions: tens of thousands of words and documents. Still the central themes are similar. *Text Mining* Sholom M. Weiss, 2005 Overview of

text mining. From textual information to numerical vectors. Using text for prediction. Information retrieval and text mining. Finding structure in a document collection looking for information in documents. Case studies. Emerging directions. Appendix. software notes. **Text Mining and Analysis** Dr. Goutam Chakraborty, Murali Pagolu, Satish Garla, 2014-11-22 Big data. It's unstructured, it's coming at you fast and there's lots of it.
