Lanham,2006-04-21 If economics is about the allocation of resources then what is the most precious resource in our new

information economy Certainly not information for we are drowning in it No what we are short of is the attention to make sense of that information With all the verve and erudition that have established his earlier books as classics Richard A Lanham here traces our epochal move from an economy of things and objects to an economy of attention According to Lanham the central commodity in our new age of information is not stuff but style for style is what competes for our attention amidst the din and deluge of new media In such a world intellectual property will become more central to the economy than real property while the arts and letters will grow to be more crucial than engineering the physical sciences and indeed economics as conventionally practiced For Lanham the arts and letters are the disciplines that study how human attention is allocated and how cultural capital is created and traded In an economy of attention style and substance change places The new attention economy therefore will anoint a new set of moguls in the business world not the CEOs or fund managers of yesteryear but new masters of attention with a grounding in the humanities and liberal arts Lanham's *The Electronic Word* was one of the earliest and most influential books on new electronic culture *The Economics of Attention* builds on the best insights of that seminal book to map the new frontier that information technologies have created [National Association of Broadcasters Engineering Handbook](#) Garrison Cavell, 2017-07-28 The NAB Engineering Handbook is the definitive resource for broadcast engineers It provides in depth information about each aspect of the broadcast chain from audio and video contribution through an entire broadcast facility all the way to the antenna New topics include Ultra High Definition Television Internet Radio Interfacing and Streaming ATSC 3.0 Digital Audio Compression Techniques Digital Television Audio Loudness Management and Video Format and Standards Conversion Important updates have been made to incumbent topics such as AM Shortwave FM and Television Transmitting Systems Studio Lighting Cameras and Principles of Acoustics The big picture comprehensive nature of the NAB Engineering Handbook will appeal to all broadcast engineers everyone from broadcast chief engineers who need expanded knowledge of all the specialized areas they encounter in the field to technologists in specialized fields like IT and RF who are interested in learning about unfamiliar topics Chapters are written to be accessible and easy to understand by all levels of engineers and technicians A wide range of related topics that engineers and technical managers need to understand are covered including broadcast documentation FCC practices technical standards security safety disaster planning facility planning project management and engineering management

[Living Stereo](#) Paul Théberge, Kyle Devine, Tom Everett, 2015-01-29 Stereo is everywhere The whole culture and industry of music and sound became organized around the principle of stereophony during the twentieth century But nothing about this not the invention or acceptance or ubiquity of stereo was inevitable Nor did the aesthetic conventions technological objects and listening practices required to make sense of stereo emerge fully formed out of the blue This groundbreaking book uncovers the vast amount of work that has been required to make stereo seem natural and which has been necessary to maintain stereo's place as a dominant mode of sound reproduction for over half a century The essays contained within this

book are thematically grouped under Audio Positions Listening Cultures and Multichannel Sound and Screen Media the cumulative effect is to advance research in music sound and media studies and to build new bridges between the fields With contributions from leading scholars across several disciplines *Living Stereo* re tells the history of twentieth century aural and musical culture through the lens of stereophonic sound [Making Stereo Fit](#) Eric Dienstfrey, 2024-01-16 Surround sound is often mistaken as a relatively new phenomenon in cinemas one that emerged in the 1970s with the arrival of Dolby *Making Stereo Fit* shows how Hollywood studios have instead been implementing surround sound techniques for the past century and argues that their endurance owes primarily to the long standing economic tension between stereophonic and monophonic sound Throughout the book Eric Dienstfrey analyzes newly discovered archival materials as well as a myriad of stereo releases from *Hell's Angels* 1930 to *Get Out* 2017 to examine how Hollywood's dependence on single channel sound left filmmakers unable to fully realize the aesthetic potential of surround sound Though studios initially experimented with stereo's unique affordances Dienstfrey details how film sound designers eventually codified a conservative set of surround sound conventions that prevail today despite the arrival of more immersive technologies **The ^AOxford Handbook of Cinematic Listening** Carlo Cenciarelli, 2021-03-29 Featuring perspectives from musicology film studies literary studies ethnomusicology sound studies popular music sociology media and communications and psychology *The Oxford Handbook of Cinematic Listening* explores the intersection between the history of listening and the history of the moving image [Sound and Recording](#) Francis Rumsey, Tim McCormick, 2014-02-24 Providing vital reading for audio students and trainee engineers this guide is ideal for anyone who wants a solid grounding in both theory and industry practices in audio sound and recording There are many books on the market covering how to work it when it comes to audio equipment but *Sound and Recording* isn't one of them Instead you'll gain an understanding of how it works with this approachable guide to audio systems New to this edition Digital audio section revised substantially to include the latest developments in audio networking e.g. RAVENNA AES X 192 AVB high resolution surround and parametric audio coding workstation processing technology mastering for iTunes and loudness normalization Coverage of immersive audio systems such as Dolby Atmos Auro 3D and WFS along with recent developments in audio object coding Sections on digital radio microphones loudspeaker sensitivity issues and development and highly directional loudspeaker systems Substantial new sections on recent developments in audio network device discovery and control and the Open Control Architecture **Sound Reproduction** Floyd E. Toole, Sean Olive, Todd Welti, 2025-10-28 This fourth edition of *Sound Reproduction: The Acoustics and Psychoacoustics of Loudspeakers, Rooms and Headphones* explains the physical and perceptual processes that are involved in sound reproduction and demonstrates how to use these processes to create high quality listening experiences in stereo and multichannel formats Understanding the principles of sound production is necessary to achieve the goals of sound reproduction in spaces ranging from recording control rooms and home listening rooms to large cinemas This revised edition includes Sections on 2 channel stereo

headphones binaural listening and DIY multiple subwoofer solutions to room resonance problems Measurable performance guidelines for loudspeaker designers Criteria for the selection of timbrally neutral loudspeakers and headphones using industry standard measurements Guidance for how best to employ loudspeakers in stereo and multichannel formats in small rooms with problematic bass resonances Advice on identifying and separating the recording and playback factors that influence sound quality and the spatial enveloping perceptions that contribute to our satisfaction This is essential reading for loudspeaker designers recording professionals and educators and aspiring professionals learning in and out of the classroom as well as being accessible for audio enthusiasts looking to enrich their hobby

**Physics in Oxford, 1839-1939** Robert Fox, Graeme Gooday, 2005-06-16 Physics in Oxford 1839 1939 offers a challenging new interpretation of pre war physics at the University of Oxford which was far more dynamic than most historians and physicists have been prepared to believe It explains on the one hand how attempts to develop the University's Clarendon Laboratory by Robert Clifton Professor of Experimental Philosophy from 1865 to 1915 were thwarted by academic politics and funding problems and latterly by Clifton's idiosyncratic concern with precision instrumentation Conversely by examining in detail the work of college fellows and their laboratories the book reconstructs the decentralized environment that allowed physics to enter on a period of conspicuous vigour in the late nineteenth and early twentieth centuries especially at the characteristically Oxonian intersections between physics physical chemistry mechanics and mathematics Whereas histories of Cambridge physics have tended to focus on the self sustaining culture of the Cavendish Laboratory it was Oxford's college trained physicists who enabled the discipline to flourish in due course in university as well as college facilities notably under the newly appointed professors J S E Townsend from 1900 and F A Lindemann from 1919 This broader perspective allows us to understand better the vitality with which physicists in Oxford responded to the demands of wartime research on radar and techniques relevant to atomic weapons and laid the foundations for the dramatic post war expansion in teaching and research that has endowed Oxford with one of the largest and most dynamic schools of physics in the world

**The Perfect Sound** Garrett Hongo, 2022-02-22 A poet's audio obsession from collecting his earliest vinyl to his quest for the ideal vacuum tubes A captivating book that ingeniously mixes personal memoir with cultural history and offers us an indispensable guide for the search of acoustic truth Yunte Huang author of Charlie Chan Garrett Hongo's passion for audio dates back to the Empire 398 turntable his father paired with a Dynakit tube amplifier in their modest tract home in Los Angeles in the early 1960s But his adult quest begins in the CD changer era as he seeks out speakers and amps both powerful and refined enough to honor the top notes of the greatest opera sopranos In recounting this search he describes a journey of identity where meaning fulfillment and even liberation were often most available to him through music and its astonishingly varied delivery systems Hongo writes about the sound of surf being his first music as a kid in Hawai'i about doo wop and soul reaching out to him while growing up among Black and Asian classmates in L A about Rilke and Joni Mitchell as the twin poets of his adolescence and about feeling the pulse of

John Coltrane's jazz and the rhythmic chords of Billy Joel's piano from his car radio while driving the freeways as a young man trying to become a poet. Journeying further, he visits devoted collectors of decades-old audio gear as well as designers of the latest tube equipment, listens to sublime arias performed at La Scala, hears a ghostly lute at the grave of English Romantic poet John Keats in Rome, drinks in wisdom from blues musicians and a diversity of poetic elders while turning his ear toward the memory-rich strains of the music that has shaped him: Hawaiian steel guitar and canefield songs, Bach and the Band, Mingus, Puccini and Duke Ellington. And in the decades-long process of perfecting his stereo setup, Hongo also discovers his own, now celebrated poetic voice.

*The Birth of British Television* Mark Aldridge, 2017-09-16 When the BBC launched the world's first regular high-definition television service on 2 November 1936, it was the culmination of decades of technological innovations. More than this, however, the service meant that the principle of television had finally found its place. *The Birth of British Television: A History* traces the early history and development of television from the experiments of amateurs to the institutionalised developments that led to the world's first regular high-definition television service. Author Mark Aldridge provides a clear, in-depth and accessible introduction for those either exploring the period for the first time or seeking new insights into the beginnings of the industry. In tracing the origins and development of television, Aldridge focuses on a number of important factors, including the attitude of the press towards early television and examines the way that expectations of television changed over time prior to its official launch. Utilising new research, this illuminating study examines how the aims for a new television service developed and the extent to which content and technology were linked. *The Birth of British Television* approaches this formative period from several perspectives: from private individuals to the BBC and government, while also examining the broader opinions at the time towards the new medium through press reports and feedback from the general public. Also included is an assessment of early programming which helps to offer a new and profound evaluation of the development of early television. Mark Aldridge is a

Lecturer in Film and TV Studies at Southampton Solent University UK He specialises in British television and both film and television history His previous publications include *T is for Television* 2008 an analysis of the work of Russell T Davies co written with Andy Murray      **National Association of Broadcasters Engineering Handbook** Graham A. *Britain's War Machine* David Edgerton, 2011-09-09 The familiar image of the British in the Second World War is that of the plucky underdog taking on German might David Edgerton's bold compelling new history shows the conflict in a new light with Britain as a very wealthy country formidable in arms ruthless in pursuit of its interests and in command of a global production system Rather than belittled by a Nazi behemoth Britain arguably had the world's most advanced mechanized forces It had not only a great empire but allies large and small Edgerton shows that Britain fought on many fronts and its many home fronts kept it exceptionally well supplied with weapons food and oil allowing it to mobilize to an extraordinary extent It created and deployed a vast empire of machines from the humble tramp steamer to the battleship from the rifle to the tank made in colossal factories the world over Scientists and engineers invented new weapons encouraged by a government and prime minister enthusiastic about the latest technologies The British indeed Churchillian vision of war and modernity was challenged by repeated defeat at the hands of less well equipped enemies Yet the end result was a vindication of this vision Like the United States a powerful Britain won a cheap victory while others paid a great price Putting resources machines and experts at the heart of a global rather than merely imperial story Britain's War Machine demolishes timeworn myths about wartime Britain and gives us a groundbreaking and often unsettling picture of a great power in action      Sound
