Givón,Masayoshi Shibatani,2009-04-22 Complex hierarchic syntax is considered one of the hallmarks of human language The highest level of syntactic complexity recursive embedded clauses has been singled out by some for a special status as the apex of the uniquely human language faculty evolutionary but somehow immune to adaptive selection This volume coming out of a symposium held at Rice University in March 2008 tackles syntactic complexity from multiple developmental perspectives We take it for granted that grammar is an adaptive instrument of communication assembled upon the pre-existing platform of pre-linguistic cognition Most of the papers in the volume deal with the two grand developmental trends of human language diachrony the communal enterprise directly responsible for fashioning synchronic morpho-syntax and ontogeny the individual endeavor directly responsible for the acquisition of competent grammatical performance The genesis of syntactic complexity along these two developmental trends is considered alongside with the cognition and neurology of grammar and of syntactic complexity and the evolutionary relevance of diachrony ontogeny and pidginization is argued on general bio-evolutionary grounds Lastly several of the contributions to the volume suggest that recursive embedding is not in itself an adaptive target but rather the by-product of two distinct adaptive gambits the recruitment of conjoined clauses as modal operators on other clauses and the subsequent condensation of paratactic into syntactic structures **Discurso Y Oralidad** Luis Cortés Rodríguez,2007 **Sintaxis de los verboides en el habla culta de la Ciudad de México** Elizabeth Luna Traill,1980 **Identidad lingüística y comportamientos discursivos** Rosario Guillén Sutil,2001 Hispanic Linguistics ,1997 *Los transpositores oracionales en la obra histórica alfonsí* Serafina García García,1990 **Estudios de historiografía lingüística** Teresa Bastardín Candón,Sociedad Española de Historiografía Lingüística.
