Sir Jonas Moore Practical Mathematics And Restoration Science:

Sir Jonas Moore Frances Willmoth,1993 Sir Jonas Moore 1617 79 practical mathematician teacher author surveyor cartographer Ordnance Officer courtier and patron of astronomy enjoyed a remarkable career by the standards of any age and was one of the first to make a substantial fortune from mathematical practice In the course of his rise as his friend John Aubrey termed it from humble origins in Lancashire to a knighthood membership of the Royal Society and favour at the court of Charles II he participated in the two most ambitious projects of the age the draining of the Great Level of the Fens under the Dutch engineer Sir Cornelius Vermuyden and the building of a massive harbour wall the Mole at Tangier In later life his wealth and influence as Surveyor General of the Ordnance enabled him to become a patron of the new Royal Observatory at Greenwich This biography the first detailed study of Moore examines his career in the context of changing views of mathematics especially in relation to 17th century disputes about the proper nature of the discipline and its effectiveness as means of solving practical problems It sheds light on the roles played by patrons and teachers of the subject most notably the figurehead of English mathematicians William Oughtred It also illuminates the confidence in practical mathematics that inspired Moore s unique activities as a patron and the uneasy relationship between this and the natural philosophical concerns of the early Royal Society This wide ranging study challenges the current conventionally narrow view of mathematics in the time of the 17th century scientific revolution **John Pell (1611-1685) and His Correspondence**

with Sir Charles Cavendish Noel Malcolm,Charles Cavendish,John Pell,Jacqueline Stedall,2005 Publisher description

The Body of the Artisan Pamela H. Smith,2024-05-31 Since the time of Aristotle the making of knowledge and the making of objects have generally been considered separate enterprises Yet during the late sixteenth and early seventeenth centuries the two became linked through a new philosophy known as science In *The Body of the Artisan* Pamela H Smith demonstrates how much early modern science owed to an unlikely source artists and artisans From goldsmiths to locksmiths and from carpenters to painters artists and artisans were much sought after by the new scientists for their intimate hands on knowledge of natural materials and the ability to manipulate them Drawing on a fascinating array of new evidence from northern Europe including artisans objects and their writings Smith shows how artisans saw all knowledge as rooted in matter and nature With nearly two hundred images *The Body of the Artisan* provides astonishingly vivid examples of this Renaissance synergy among art craft and science and recovers a forgotten episode of the Scientific Revolution an episode that forever altered the way we see the natural world *Ancient Wisdom in the Age of the New Science* Dmitri

Levitin,2015-09-15 A groundbreaking revisionist account of the importance of the history of philosophy to intellectual change scientific philosophical and religious in seventeenth century England *A History of Science in the Netherlands* Klaas van Berkel,Albert van Helden,L.C. Palm,2023-07-03 In the 400 years of its modern history the Netherlands has produced a distinguished array of eminent mathematicians scientists and medical researchers including many Nobel prize winners and

other internationally recognised figures from Stevin Snel and Huygens in the 17th century to Lorentz Kammerlingh Onnes Buys Ballot De Vries de Sitter and Oort in the 19th and 20th centuries Yet it has often been noted that the history of science in the Netherlands is underrepresented in the international literature The handbook *A History of Science in The Netherlands* aims to correct this situation by providing a chronological and thematic survey of the field from the 16th century to the present essays on selected aspects of science in the Netherlands and reference biographies of about 65 important Dutch scientists Written by more than 10 experts from Europe and North America the handbook is the standard English language reference work for the field

Beyond the Learned Academy Philip Beeley, Christopher Hollings, 2024 Comprising fifteen essays by leading authorities in the history of mathematics this volume aims to exemplify the richness diversity and breadth of mathematical practice from the seventeenth century through to the middle of the nineteenth century

The Power of Knowledge Jeremy Black, 2014-01-14 Information is power For more than five hundred years the success or failure of nations has been determined by a country's ability to acquire knowledge and technical skill and transform them into strength and prosperity Leading historian Jeremy Black approaches global history from a distinctive perspective focusing on the relationship between information and society and demonstrating how the understanding and use of information have been the primary factors in the development and character of the modern age Black suggests that the West's ascension was a direct result of its institutions and social practices for acquiring employing and retaining information and the technology that was ultimately produced His cogent and well reasoned analysis looks at cartography and the hardware of communication armaments and sea power mercantilism and imperialism science and astronomy as well as bureaucracy and the management of information linking the history of technology with the history of global power while providing important indicators for the future of our world

Samuel Pepys, Isaac Newton, James Hodgson, and the Beginnings of Secondary School Mathematics Nerida F. Ellerton, M. A. (Ken) Clements, 2017-03-02 This book tells one of the greatest stories in the history of school mathematics Two of the names in the title Samuel Pepys and Isaac Newton need no introduction and this book draws attention to their special contributions to the history of school mathematics According to Ellerton and Clements during the last quarter of the seventeenth century Pepys and Newton were key players in defining what school mathematics beyond arithmetic and elementary geometry might look like The scene at which most of the action occurred was Christ's Hospital which was a school ostensibly for the poor in central London The Royal Mathematical School RMS was established at Christ's Hospital in 1673 It was the less well known James Hodgson a fine mathematician and RMS master between 1709 and 1755 who demonstrated that topics such as logarithms plane and spherical trigonometry and the application of these to navigation might systematically and successfully be taught to 12 to 16 year old school children From a wider history of school education perspective this book tells how the world's first secondary school mathematics program was created and how slowly but surely what was being achieved at RMS began to influence school mathematics in other parts of Great Britain Europe and

America The book has been written from the perspective of the history of school mathematics Ellerton and Clements s analyses of pertinent literature and of archival data and their interpretations of those analyses have led them to conclude that RMS was the first major school in the world to teach mathematics beyond arithmetic on a systematic basis to students aged between 12 and 16 Throughout the book Ellerton and Clements examine issues through the lens of a lag time theoretical perspective From a historiographical perspective this book emphasizes how the history of RMS can be portrayed in very different ways depending on the vantage point from which the history is written The authors write from the vantage point of international developments in school mathematics education and therefore their history of RMS differs from all other histories of RMS most of which were written from the perspective of the history of Christ s Hospital

Mathematical Book Histories Philip Beeley,Ciarán Mac an Bhaird,2024-08-12 This book both articulates and responds to increasing scholarly interest in the materiality of the book Taking as its base the unique collection of mathematical books in the Russell Library at Maynooth it addresses questions related to printing techniques and print culture book production provenance and reading practices It considers the histories of individual items of the Russell Collection their previous locations and owners and explores ways in which annotations underlinings hand drawn diagrams and the like reveal patterns of reading and usage Finally it seeks to elicit more information on a previously under researched topic the historical role of mathematics in the extensive network of Irish colleges that once covered Catholic Europe located in places such as Salamanca Rome Douai and Prague Alongside delivering important new insights into print culture as a medium for transmitting scientific ideas Mathematical Book Histories is thus also intended to contribute to a broader understanding of the role and significance of mathematics in the context of clerical instruction and more broadly in the academic tradition of Ireland up to the beginning of the twentieth century Many of the volumes in the Russell Library reflect the remarkably rich book trade that flourished in seventeenth and early eighteenth century Dublin and which was quite distinct from that in London Booksellers often bought in their wares directly from abroad with the result that publications could enter collections that did not enter the purview of contemporary English or Scottish scholars in Britain

Ash,2004 Publisher Description The Invention of Improvement Paul Slack,2015 The idea of improvement gradual and cumulative betterment was something new in 17th century England It became commonplace to assert that improvements in agriculture industry commerce and social welfare would bring infinite prosperity and happiness The word improvement was itself new and since it had no equivalent in other languages it gave the English a distinctive culture of improvement which they took with them to Ireland Scotland and America Slack explains the political intellectual and economic circumstances which allowed notions of improvement to take root François Blondel Anthony Gerbino,2012-12-06 First director of the Acad mie royale d architecture Fran ois Blondel established a lasting model for architectural education that helped transform a still largely medieval profession into the one we recognize today Most

well known for his 1676 urban plan of Paris Blondel is also celebrated as a mathematician scientist and scholar Few figures are more representative of the close affinity between architecture and the new science of the seventeenth century The first full length study in English to appear on this polymath this book adds to the scholarship on early modern architectural history and particularly on French classicism under Louis XIV and his minister Jean Baptiste Colbert It studies early modern science and technology Baroque court culture and the development of the discipline of architecture

Reckoning with Matter Matthew L. Jones, 2016-11-29 From Blaise Pascal in the 1600s to Charles Babbage in the first half of the nineteenth century inventors struggled to create the first calculating machines All failed but that does not mean we cannot learn from the trail of ideas correspondence machines and arguments they left behind In *Reckoning with Matter* Matthew L. Jones draws on the remarkably extensive and well preserved records of the quest to explore the concrete processes involved in imagining elaborating testing and building calculating machines He explores the writings of philosophers engineers and craftspeople showing how they thought about technical novelty their distinctive areas of expertise and ways they could coordinate their efforts In doing so Jones argues that the conceptions of creativity and making they exhibited are often more incisive and more honest than those that dominate our current legal political and aesthetic culture

Sailing School Margaret E. Schotte, 2019-07-30 Hands on science in the Age of Exploration Winner of the John Lyman Book Award in Naval and Maritime Science and Technology by the North American Society for Oceanic History and the Leo Gersho Prize by the American Historical Association Throughout the Age of Exploration European maritime communities bent on colonial and commercial expansion embraced the complex mechanics of celestial navigation They developed schools textbooks and instruments to teach the new mathematical techniques to sailors As these experts debated the value of theory and practice memory and mathematics they created hybrid models that would have a lasting impact on

applied science In *Sailing School* a richly illustrated comparative study of this transformative period Margaret E Schotte charts more than two hundred years of navigational history as she investigates how mariners solved the challenges of navigating beyond sight of land She begins by outlining the influential sixteenth century Iberian model for training and certifying nautical practitioners She takes us into a Dutch bookshop stocked with maritime manuals and a French trigonometry lesson devoted to the idea that navigation is nothing more than a right triangle The story culminates at the close of the eighteenth century with a young British naval officer who managed to keep his damaged vessel afloat for two long months thanks largely to lessons he learned as a keen student This is the first study to trace the importance for the navigator s art of the world of print Schotte interrogates a wide variety of archival records from six countries including hundreds of published textbooks and never before studied manuscripts crafted by practitioners themselves Ultimately *Sailing School* helps us to rethink the relationship among maritime history the Scientific Revolution and the rise of print culture during a period of unparalleled innovation and global expansion

The Wreckage of Intentions David Alff, 2017-09-12 The seventeenth and eighteenth centuries in Britain saw the proposal of so many endeavors called projects a catchphrase for the daring sometimes dangerous practice of shaping the future that Daniel Defoe dubbed his era a Projecting Age These ideas spanned a wide variety of scientific technological and intellectual interventions intended for the betterment of England But for all the fanfare surrounding them few such schemes actually materialized leaving scores of defunct visions from Defoe s own attempt to farm cats for perfume to Mary Astell s proposal to charter a college for women to countless ventures for improving land streamlining government and inventing new consumer goods Taken together these failed plans form a compelling alternative history of a Britain that might have been *The Wreckage of Intentions* offers a comprehensive and critical account of projects exploring the historical memory surrounding these concrete yet incomplete efforts to advance British society during a period defined by revolutions in finance and agriculture the rise of experimental science and the establishment of constitutional monarchy Using methods of literary analysis David Alff shows how projects began as written proposals circulated as print objects spurred physical undertakings and provoked responses in the realms of poetry fiction and drama Mapping this process discloses the ways in which eighteenth century authors applied their faculties of imagination to achieve finite goals and in so doing devised new ways of seeing the world through its future potential Approaching old projects through the language landscapes data and personas they left behind Alff contends this vision was and remains vital to the functions of statecraft commerce science religion and literature

Robert Hooke and the Rebuilding of London Michael Cooper, 1998-02-19 Robert Hooke was one of the most gifted men of his age but it was his great misfortune to work in the sphere of two remarkable men Isaac Newton and Christopher Wren While they gained the recognition of a monument in Westminster Abbey Hooke died unloved alone and in poverty This title recognizes the great contribution that he made
