Global Governance in a World of Change Michael N. Barnett,Jon C. W. Pevehouse,Kal Raustiala,2021-12-09 Global governance has come under increasing pressure since the end of the Cold War In some issue areas these pressures have led to significant changes in the architecture of governance institutions In others institutions have resisted pressures for change This volume explores what accounts for this divergence in architecture by identifying three modes of governance hierarchies networks and markets The authors apply these ideal types to different issue areas in order to assess how global governance has changed and why In most issue areas hierarchical modes of governance established after World War II have given way to alternative forms of organization focused on market or network based architectures Each chapter explores whether these changes are likely to lead to more or less effective global governance across a wide range of issue areas This provides a novel and coherent theoretical framework for analysing change in global governance This title is available as Open Access on Cambridge Core

Golden, S. Raghavan, Edward A. Wasil, 2008-07-20 Theoretical research and practical applications in the field of vehicle routing started in 1959 with the truck dispatching problem posed by Dantzig and Ramser 1 and the optimum routing of a fleet of gasoline delivery trucks between a bulk terminal and a large number of service stations supplied by the terminal Using a method based on a linear programming formulation their hand calculations produced a near optimal solution with four routes to a problem with twelve service stations The authors proclaimed No practical applications of the method have been made as yet In the nearly 50 years since the Dantzig and Ramser paper appeared work in the field has exploded dramatically Today a Google Scholar search of the words vehicle routing problem VRP yields more than 21 700 entries The June 2006 issue of OR MS Today provided a survey of 17 vendors of commercial routing software whose packages are currently capable of solving average size problems with 1 000 stops 50 routes and two hour hard time windows in two to ten minutes 2 In practice vehicle routing may be the single biggest success story in operations research For example each day 103 500 drivers at UPS follow computer generated routes The drivers visit 7.9 million

customers and handle an average of 15 6 million packages 3

What If? Building Students' Problem-Solving Skills

Through Complex Challenges Ronald A. Beghetto ,2018-08-28 If a fundamental goal of schooling is to prepare young people for the unknowable future why do we assign students so many clearly defined tasks with predetermined solutions According to educator and creativity expert Ronald A Beghetto the best way to unleash students problem solving and creativity and thus prepare them to face real world problems is to incorporate complex challenges that teach students to respond productively to uncertainty In this thought provoking book Beghetto explains How to foster possibility thinking to help students open up their thinking in creative sometimes counterintuitive ways The process of lesson unplanning a way of transforming existing lessons activities and assignments into more complex classroom challenges Four basic action principles that teachers and students can use to design and solve complex challenges both inside and outside the classroom The steps for creating legacy challenges which require students to identify a problem develop a solution and ensure that their work makes a lasting contribution With planning forms and detailed sample activities this practical guide will enable teachers at every grade level to design a full range of challenges in any subject area Invite uncertainty into your classroom and discover what your students are capable of *The Computing Teacher* ,1987 **The 60 Second Innovator** Jeff
