**Plasmas in the Universe** Società italiana di fisica, 2000-10-25 This book illustrates new developments in the fields of space and solar physics stellar physics extragalactic physics and cosmology It also elaborates upon the progress of laboratory plasma physics One of the topics discussed is the existence of collective processes both linear and non linear that can explain key elements of accretion physics magnetic reconnection the formation of strange particle distributions particle scattering phenomena etc Astrophysical plasma are dominated by turbulent or quasi turbulent processes which interactively associate instabilities radiation processes and plasma wave scattering The resulting scenario which is outside thermodynamics and conventional statistical physics is too difficult to describe theoretically but today there are large scale experiments and powerful computational tools allowing for the exploration of an almost similarly complex variety of phenomena Several contributions to this book present indications of the influence of nonlinear phenomena in astrophysical applications This work marks the fast growth of plasma astrophysics thanks to new observations in the high energy band of the spectrum on the one hand and the possibility of validating and bringing to light relevant new theories by increasingly sophisticated machines on the other II International GTC Workshop Ana Maria Hidalgo-Gómez, 2005

**Extreme Solar Systems** Debra Fischer, 2008 These are the proceedings of an international conference held in June 2007 on Santorini Island Greece on the occasion of the 15th anniversary of the discovery of the first extrasolar planets around the radio pulsar PSR 1257 12 The year 2007 also happened to coincide approximately with the 60th birthday of their discoverer Alex Wolszczan The main scientific themes of the meeting included the detection and characterization of earth like planets using all presently available and future techniques planets in extreme environments dense star clusters binaries planets around evolved stars giants white dwarfs pulsars and the habitability of extreme planets Both researcher and graduate students will benefit from the in depth and up to date coverage of the theoretical and observational issues in the 62 invited talks and 17 contributed papers
