Growth Management and Affordable Housing Anthony Downs, 2004-06-15 Advocates of growth management and smart growth often propose policies that raise housing prices thereby making housing less affordable to many households trying to buy or rent homes Such policies include urban growth boundaries zoning restrictions on multi family housing utility district lines building permit caps and even construction moratoria Does this mean there is an inherent conflict between growth management and smart growth on the one hand and creating more affordable housing on the other Or can growth management and smart growth promote policies that help increase the supply of affordable housing These issues are critical to the future of affordable housing because so many local communities are adopting various forms of growth management or smart growth in response to growth related problems Those problems include rising traffic congestion the absorption of open space by new subdivisions and higher taxes to pay for new infrastructures This book explores the relationship between growth management and smart growth and affordable

housing in depth It draws from material presented at a symposium on these subjects held at the Brookings Institution in May 2003 sponsored by the U S Department of Housing and Urban Development the National Association of Realtors and the Fannie Mae Foundation Contributors seek to inform the debate and provide some useful answers to help the nation accommodate the curtailment of growth in urban and suburban domains while still ensuring a supply of affordable housing Contributors include Karen Destorel Brown Brookings Robert Burchell Rutgers University Daniel Carlson University of Washington David L Crawford Econsult Corporation Anthony Downs Brookings Ingrid Gould Ellen New York University William Fischel Dartmouth College George C Galster Wayne State University Jill Khadduri Abt Associates Gerrit J Knaap University of Maryland Robert Lang Virginia Polytechnic

Towards Sustainable Cities Peter J. Marcotullio, 2017-09-08 While there has been much recent research into achieving sustainability in urban areas most of this is specific to a particular region This volume broadens these discussions by extending the analysis from North American and European cities to include East Asian cities Many cities in Asia have deep historical roots have sustained dense populations through time and have grown prosperous in recent decades They also face significant environmental degradation and other planning challenges In bringing together and comparing strategies and experiences from three distinct global regions this book offers unique insights and new perspectives on the challenges of moving towards

greater urban sustainability While questioning which strategies can promote sustainable cities in a global context the book also illustrates that while formulae generated out of American and European experience cannot be universally applied some of the analytical approaches and experience of the other developed countries can offer insights for those working in different contexts It argues that managing urban change for greater urban sustainability in diverse regions requires detailed understanding of local issues and regional strategies as well as strong support from local communities
