Zero Fear Trading J. Pecunia, Trading is challenging for most people because they simply don't have information tools or confidence to become successful This book is important for beginners because it tells it like it is and gives an inside look at trading the financial markets giving you the reality on what the live market is really like the way they are really run and tells you who runs them and what you need to do as a self directed beginner to survive in them and trade with zero fear Let's face it it's a well known fact that 97% of brand new self directed investors and traders fail and lose all of their money why does this happen It happens because brand new self directed traders enter into this business with a bunch of misguided grandiose ideas of making a million dollars from trading and while you can surely make millions of dollars from trading you would need to be using hundreds of millions of dollars of capital to do so no joke As a brand new self directed trader you have no idea of the brutality and volatility that goes on in the live markets on a daily basis and that there are people in the live markets who will walk over dead bodies to get paid so make no mistake as a beginner and think you can go in the live market and beat them you can't What you can do though is properly prepare yourself to trade with the best traders in the world and get paid right along with them instead of paying them Once you have completed reading this entire book you will have a chance at trading with zero fear and competing with the best professional traders on the planet The information in this book will put you on the fast track to being able to make an unlimited income for yourself and becoming consistently profitable enough from trading the financial markets to perhaps even making a living from doing it isn't that the type of business you would like to be in *How to Day Trade Forex for High Profits* Joe Corrado, **Supply and Demand Trading Strategies for**

How to win more trades as a Beginner Trader Ricardo Moneta, It is a huge step when you make the decision to become a financial market trader. Most brand new traders are getting into this business because they think they can win a lot of trades and make quick money and become rich beyond their dreams and while that could happen and may be true it is not as easy as one thinks and certainly will not happen as soon as one thinks. New people most of the time have not done their research and have no idea they are entering a business where there are people in the live market who will walk over dead bodies to make money. They are entering a business where the smart money in the business are looking to drain your trading account on a daily basis and most of the time they do because new people come into the business unprepared or at best under prepared as well as underfunded. Don't be that trader. It is not about how much you know in this business but about the quality of what you know. Instead of learning it the simple way and keeping things very simple brand new traders tend to over complicate their learning by trying to learn and use all the indicators in the universe. They put all the pretty colored indicators on their charts thinking that they are going to become better traders and make lots of money and win more trades by having them on the chart. Nothing could be further from the truth actually. This book details a lot of what the brand new traders need to know right away to be able to make real money right away. It is completely up to you to learn this business the right way will you.

Irrational Exuberance Robert J. Shiller, 2016-08-16 Why the irrational exuberance of investors hasn't disappeared since the financial crisis. In this revised updated and expanded edition of his New York Times bestseller Nobel Prize winning economist Robert Shiller who warned of both the tech and housing bubbles cautions that signs of irrational exuberance among investors have only increased since the 2008-9 financial crisis. With high stock and bond prices and the rising cost of housing the post subprime boom may well turn out to be another illustration of Shiller's influential argument that psychologically driven volatility is an inherent characteristic of all asset markets. In other words Irrational Exuberance is as relevant as ever. Previous editions covered the stock and housing markets and famously predicted their crashes. This edition expands its coverage to include the bond market so that the book now addresses all of the major investment markets. It also includes updated data throughout as well as Shiller's 2013 Nobel Prize lecture which places the

book in broader context In addition to diagnosing the causes of asset bubbles Irrational Exuberance recommends urgent policy changes to lessen their likelihood and severity and suggests ways that individuals can decrease their risk before the next bubble bursts No one whose future depends on a retirement account a house or other investments can afford not to read this book
