Smoothed Particle Hydrodynamics Tanmayee Gupte, 2018 Smoothed particle hydrodynamics SPH is a meshfree particle method based on a Lagrangian formulation which has been widely applied to different areas in astrophysics involving complicated fluid dynamical processes For the first part of this project we have expanded an existing smoothed particle hydrodynamic code StarCrash We have added different time integration methods and used them to study the code's overall ability to conserve energy In the second part we have evaluated the StarCrash code's ability to use different numerical treatments to perform shock tube simulations via Sod's shock tube test We have used different evolution schemes involving either the energy or the entropy of the system along with different artificial viscosity formulations and compared the results from the numerical simulations with the analytical solution

Abstract

Meshfree Particle Methods Shaofan Li, Wing Kam Liu, 2007-03-07 Meshfree Particle Methods is a comprehensive and systematic exposition of particle methods meshfree Galerkin and partition of unity methods molecular dynamics methods and multiscale methods Most theories computational formulations and simulation results presented are recent developments in meshfree methods They were either just published recently or even have not been published yet many of them resulting from the authors own research The presentation of the technical content is heuristic and explanatory with a balance between mathematical rigor and engineering practice It can be used as a graduate textbook or a comprehensive source for researchers providing the state of the art on Meshfree Particle Methods
