Basic sleep Mechanisms Olga Petre-Quadens, 2012-12-02

Basic Sleep Mechanisms is a collection of studies about the different mechanisms that facilitate the process of sleep. The studies, despite being made by experts of different subspecialties, are more purposed for general interest. The book is divided into four parts. Part I covers the concepts under the neurophysiological mechanisms of sleep, such as the sleep-wake cycle, pontine stimulations of sleep, and the role of different parts of the nervous system in sleep. Part II includes topics under the neurochemical aspects of sleep and the role of monoaminergic neurons in it. Part III discusses the different three states of the adult human body, the direction in its research, and its psychological aspect. Part IV explains the developmental aspects of sleep, especially in infants and children. The text is recommended for neurologists, doctors, and psychologists who want to know more about the study or to conduct their own study about sleep, the principles behind it, and its development.

Neurological Modulation of Sleep Ronald Ross Watson, Victor R. Preedy, 2020-01-15. Neurological Modulation of Sleep provides readers with updated scientific reviews regarding the interaction between sleep and contributing factors, with special attention paid to the potential for neurological modulation of sleep via diet. This book expands the notion of diet and adds an element of physical activity and exercise, as well as a chapter on caffeine and its effects on sleep. With 30 international contributors, this book aims to provide readers with a unique global perspective on the role these factors play in sleep architecture and its regulation by circadian biology and neurology. Sleep disorders have become an increasing problem plaguing more than 70 million Americans according to the American Sleep Association. There is a clear association between sleep disorder and a wide range of other human disorders, performance deficiencies, psychiatric illnesses, heart disease, obesity, and more. But in spite of this, there is not yet a convenient overview on the market detailing the impact of obesity, age, diabetes, and diet on sleep duration and attendant health outcomes. Describes the impact of diet, caffeine, and physical activity on sleep. Reviews the neurology and metabolism of sleep. Identifies what foods impact sleep and how. Discusses the clinical use of nutraceuticals to improve sleep.
