The Quality of the Archaeological Record Charles Perreault, 2019-09-16 Paleobiology struggled for decades to influence our understanding of evolution and the history of life because it was stymied by a focus on microevolution and an incredibly patchy fossil record But in the 1970s the field took a radical turn as paleobiologists began to investigate processes that could only be recognized in the fossil record across larger scales of time and space That turn led to a new wave of macroevolutionary investigations novel insights into the evolution of species and a growing prominence for the field among the biological sciences In *The Quality of the Archaeological Record* Charles Perreault shows that archaeology not only faces a parallel problem but may also find a model in the rise of paleobiology for a shift in the science and theory of the field To get there he proposes a more macroscale approach to making sense of the archaeological record an approach that reveals patterns and processes not visible within the span of a human lifetime but rather across an observation window thousands of years long and thousands of kilometers wide Just as with the fossil record the archaeological record has the scope necessary to detect macroscale cultural phenomena because it can provide samples that are large enough to cancel out the noise generated by micro scale events By recalibrating their research to the quality of the archaeological record and developing a true macroarchaeology program Perreault argues archaeologists can finally unleash the full contributive value of their discipline

Rock, Bone, and Ruin Adrian Currie, 2024-05-21 An argument that we should be optimistic about the capacity of methodologically omnivorous geologists paleontologists and archaeologists to uncover truths about the deep past The historical sciences geology paleontology and archaeology have made extraordinary progress in advancing our understanding of the deep past How has this been possible given that the evidence they have to work with offers mere traces of the past In Rock Bone and Ruin Adrian Currie explains that these scientists are methodological omnivores with a variety of strategies and techniques at their disposal and that this gives us every reason to be optimistic about their capacity to uncover truths about prehistory Creative and opportunistic paleontologists for example discovered and described a new species of prehistoric duck billed platypus from a single fossilized tooth Examining the complex reasoning processes of historical science Currie also considers philosophical and scientific reflection on the relationship between past and present the nature of evidence contingency and scientific progress Currie draws on varied examples from across the historical sciences from Mayan ritual sacrifice to giant Mesozoic fleas to Mars's mysterious watery past to develop an account of the nature of and resources available to historical science He presents two major case studies the emerging explanation of sauropod size and the snowball earth hypothesis that accounts for signs of glaciation in Neoproterozoic tropics He develops the Ripple Model of Evidence to analyze unlucky circumstances in scientific investigation examines and refutes arguments for pessimism about the capacity of the historical sciences defending the role of analogy and arguing that simulations have an experiment like function Currie argues for a creative open ended approach empirically grounded speculation

Considered Judgment Catherine Z. Elgin, 1999-02-01 Philosophy long sought to set knowledge on a firm foundation through derivation of indubitable truths by infallible rules For want of such truths and rules the enterprise foundered Nevertheless foundationalism s heirs continue their forbears quest seeking security against epistemic misfortune while their detractors typically espouse unbridled coherentism or facile relativism Maintaining that neither stance is tenable Catherine Elgin devises a via media between the absolute and the arbitrary reconceiving the nature goals and methods of epistemology In Considered Judgment she argues for a reconception that takes reflective equilibrium as the standard of rational acceptability A system of thought is in reflective equilibrium when its components are reasonable in light of one another and the account they comprise is reasonable in light of our antecedent convictions about the subject it concerns Many epistemologists now concede that certainty is a chimerical goal But they continue to accept the traditional conception of epistemology s problematic Elgin suggests that in abandoning the quest for certainty we gain opportunities for a broader epistemological

purview one that comprehends the arts and does justice to the sciences She contends that metaphor fiction emotion and exemplification often advance understanding in science as well as in art The range of epistemology is broader and more variegated than is usually recognized Tenable systems of thought are neither absolute nor arbitrary Although they afford no guarantees they are good in the way of belief

The Archaeology of Childhood Güner Coşkunsu, 2015-11-16 Children existed in ancient times as active participants in the societies in which they lived and the cultures they belonged to Despite their various roles and in spite of the demographic composition of ancient societies where children comprised a large percentage of the population children are almost completely missing in many current archaeological discourses To remedy this The Archaeology of Childhood aims to instigate interdisciplinary dialogues between archaeologists and other disciplines on the notion of childhood and children and to develop theoretical and methodological approaches to analyze the archaeological record in order to explore and understand children and their role in the formation of past cultures Contributors consider how the notion of childhood can be expressed in artifacts and material records and examine how childhood is described in literary and historical sources of people from different regions and cultures While we may never be able to reconstruct every last aspect of what childhood was like in the past this volume argues that we can certainly bring children back into archaeological thinking and research and correct many erroneous and gender biased interpretations

Making Prehistory Derek Turner, 2007-07-05 Scientists often make surprising claims about things that no one can observe In physics chemistry and molecular biology scientists can at least experiment on those unobservable entities but what about researchers in fields such as paleobiology and geology who study prehistory where no such experimentation is possible Do scientists discover facts about the distant past or do they in some sense make prehistory In this book Derek Turner argues that this problem has surprising and important consequences for the scientific realism debate His discussion covers some of the main positions in philosophy of science realism social constructivism empiricism and the natural ontological attitude and shows how they relate to issues in paleobiology and geology His original and thought provoking book will be of wide interest to philosophers and scientists alike
