Gains examines how the demand for rapid shipping has revolutionized global commerce logistics and supply chain management. It highlights the courier services competition driving relentless efficiency improvements and explores the economic and management strategies behind this transformation. Consider that faster delivery has become a strategic imperative compelling businesses to innovate across all operations and fundamentally altering consumer behavior in the e-commerce landscape. The book adopts an interdisciplinary approach integrating technology, economics, and consumer psychology to provide a comprehensive understanding. It begins by tracing the evolution of package delivery, then progresses through analyses of technological infrastructure, competitive strategies among major delivery players, and the profound impact on consumer expectations. Supported by case studies and statistical data, the book offers practical insights for businesses to optimize supply chains and enhance customer satisfaction in the fast-paced world of express delivery.

Entrepreneurship in Power Semiconductor Devices, Power Electronics, and Electric Machines and Drive Systems. Krishnan Ramu, 2020-12-07. Entrepreneurship in Power Semiconductor Devices, Power Electronics, and Electric Machines and Drive Systems introduces the basics of entrepreneurship and a methodology for the study of entrepreneurship in electrical engineering and other engineering fields. Entrepreneurship is considered here in three fields of electrical engineering: viz. power semiconductor devices, power electronics, and electric machines and drive systems, and their current practice. It prepares the reader by providing a review of the subject matter in the three fields, their current status in research and development, with analysis as needed, thus allowing readers to gain self-sufficiency while reading the book. Each field's emerging applications, current market, and future market forecasts are introduced to understand the basis and need for emerging startups. Practical learning is introduced in: i) power semiconductor devices entrepreneurship through the prism of 20 startups in detail; ii) power electronics entrepreneurship through 28 startup companies arranged under various application fields; and iii) electric machines and drive systems entrepreneurship through 15 startups in electromagnetic and 1 in electrostatic machines and drive systems. The book: i) demystifies entrepreneurship in a practical way to equip engineers and students with entrepreneurship as an option for their professional growth pursuit and success; ii) provides engineering managers and corporate level executives a detailed view of entrepreneurship activities in the considered three fields that may potentially impact their businesses; iii) provides entrepreneurship education in an electrical engineering environment and with direct connection and correlation to their fields of study; and iv) endows a methodology that can be effectively employed not only in the three illustrated fields of electrical engineering but in other fields as well. This book is for electrical engineering students and professionals. For use in undergraduate and graduate courses in electrical engineering, the book contains discussion questions, exercise problems, team and class projects, all from a practical point of

view to train students and assist professionals for future entrepreneurship endeavors
