Algebra School Mathematics Project,1992-01-01 This is the answer book for the equations and expressions booklets of the SMP 11 16 course The Sociology of Mathematics Education Paul Dowling,2002-11-01 Until the 1960s maths was studied as an academic subject in a desire to have more mathematicians The current trend however has moved away from viewing maths as a purely intellectual endeavour and towards developing a more mathematically competent workforce and citizenry This trend has seen a large increase in the number of maths schemes being produced by the major educational publishers which attempt to make maths easier and more approachable by using language instead of symbols So why do so many children still fail at maths The author contends that to understand this teachers need to analyze and evaluate the maths textbooks they are currently using The author shows the reader how to systematically analyze and evaluate these textbooks This interrogation of classroom resources should have important implications for teaching strategies and for textbook design and use *Ethics and Mathematics Education* Paul Ernest,2024-06-10 This edited volume is an inquiry into the ethics of mathematics education and to a lesser extent the ethics of mathematics The imposition of mathematics for all raises questions of ethics What are the ethics of teaching school mathematics What are the costs as well as the benefits What are the ethical issues raised by the official aims of mathematics teaching the planned curriculum the pedagogies employed in school and college mathematics and the assessment systems These questions are addressed in the book as well as what systems of ethics we might use The volume ventures into a burgeoning new field It offers a unique set of investigations both theoretical and in terms of practices It announces the ethics of mathematics education as a new subfield of research and includes valuable contributions from many of the best known researchers in mathematics education additionally it is a valuable resource for students teachers and researchers in the field This is an enduring and classic source book in the field From the wisdom of leading scholars to the little heard voices of students this collection offers the reader many striking new insights into the ethics of mathematics and education **Doing Research/Reading Research** Paul Dowling,Andrew Brown,2012-12-06 This bestselling text enables beginning researchers to organise and evaluate the research they read and to plan and implement small scale research projects of their own It gives structured practical guidance on the development of a research question techniques of data collection qualitative and quantitative forms of analysis the writing and dissemination of research The authors present research as a principled activity that begins with the establishing and structuring of theoretical and empirical fields and research findings as serving to ask questions of educational practice rather than directing it This revised and updated second edition includes a new chapter dealing with the complex issue of research ethics It also includes consideration of digital technologies and new media both as settings of research and research tools the chapters on qualitative and quantitative analysis have been expanded and the annotated bibliography updated The authors have been active researchers in educational studies for more than twenty years They have also supervised numerous doctoral and

masters dissertations and taught research methods programmes in various higher education institutions around the world as well as in the Institute of Education University of London

X-Ray and Neutron Reflectivity: Principles and Applications Jean Daillant, Alain Gibaud, 2003-07-01 The reflection of x rays and neutrons from surfaces has existed as an experimental technique for almost fifty years. Nevertheless only in the last few years have these methods become as popular probes of the surfaces and interfaces as the x rays and neutrons. This is due to the convergence of intense different circumstances. These include the more availability of neutron sources that can overcome so reflectivity x ray many of and the much weaker surface diffuse scattering can now also be measured. The study of thin films and interfaces has become a topic of growing importance in both basic and applied research. The realization of the importance of the surfaces and interfaces in both fundamental and technological research has led to the development of a number of statistical models to characterize the surfaces and interfaces. The role of surface roughness in the growth of thin films and the development of surface topology and its characterization from surface roughness dependence growth processes. The ability of surface scattering experiments to study surfaces over a wide range of length scales from a few orders of magnitude up to several micrometers makes these the choice for buried interfaces. Surface scattering is often preferred for obtaining information about the microstructure of surfaces. This is in a complementary manner to other imaging microscopy techniques. Such studies in the literature have witnessed the veritable explosion published in the last few years. Thus these lectures will be useful for over a resource years.
