The Last Sorcerers Richard Morris, 2003-10-10 They started with four earth air fire and water From these basics they sought to understand the essential ingredients of the world Those who could see further those who understood that the four were just the beginning were the last sorcerers and the world's first chemists What we now call chemistry began in the fiery cauldrons of mystics and sorcerers seeking not to make a better world through science but rather to make themselves richer through magic formulas and con games But among these early magicians frauds and con artists were a few far seeing alchemists who through rigorous experimentation transformed mysticism into science By the 18th century the building blocks of nature the elements of which all matter is composed were on the verge of being discovered Initially it was not easy to determine whether a substance really was an element Was water just water plain and simple Or could it be the sum of other unknown and maybe unknowable parts And if water was made up of other substances how could it be broken down into discreet fundamental and measurable components Scientific historians generally credit the great 18th century French chemist Antoine Lavoisier with addressing these fundamental questions and ultimately modernizing the field of chemistry Through his meticulous and precise work this chaotic new field of scientific inquiry was given order Exacting by nature Lavoisier painstakingly set about performing experiments that would provide lasting and verifiable proofs of various chemical theories Unfortunately the outspoken Lavoisier eventually lost his head in the Terror but others would follow his lead carefully examining measuring and recording their findings As the field slowly progressed another pioneer was to emerge almost 100 years later Dimitri Mendeleev an eccentric genius who cut his flowing hair and beard but once a year sought to answer the most pressing questions that remained to chemists Why did some elements have properties that resembled those of others Were there certain natural groups of elements And if so how many and what elements fit into them It was Mendeleev who finally addressed all these issues when he constructed the first Periodic Table in the late 1800s But between and after Lavoisier and Mendeleev were a host of other colorful brilliant scientists who made their mark on the field of chemistry Depicting the lively careers of these scientists and their contributions while carefully deconstructing the history and the science author Richard Morris skillfully brings it all to life Hailed by Kirkus Reviews as a clear and lively writer with a penchant for down to earth examples Morris's gift for explanation and pure entertainment is abundantly obvious Taking a cue from the great chemists themselves Morris has
