

Electrostatic sound reproduction

- Electrostatic sound reproduction utilizes a diaphragm suspended between two charged plates to produce sound
- When audio signal voltage varies, it alters the diaphragm's position, creating sound waves
- This technology enables highly accurate sound reproduction due to low mass and lack of mechanical resistance
- However, electrostatic speakers typically require high voltage and are more expensive, limiting their widespread use

Practical example: Speakers

- Electrostatic sound reproduction in speakers involves using a thin, electrically charged diaphragm positioned between two conductive plates
- When audio signals pass through, the diaphragm vibrates, producing sound
- These speakers can deliver exceptionally clear and detailed audio, making them favored for high-fidelity sound systems
- The lack of mechanical parts moving like conventional speakers results in less distortion, offering a pure listening experience

The Age of Electroacoustics Roland Wittje, 2016-11-11 The transformation of acoustics into electroacoustics a field at the intersection of science and technology guided by electrical engineering industry and the military At the end of the nineteenth century acoustics was a science of musical sounds the musically trained ear was the ultimate reference Just a few decades into the twentieth century acoustics had undergone a transformation from a scientific field based on the understanding of classical music to one guided by electrical engineering with industrial and military applications In this book Roland Wittje traces this transition from the late nineteenth century work of Hermann Helmholtz to the militarized research of World War I and media technology in the 1930s Wittje shows that physics in the early twentieth century was not only about relativity and atomic structure but encompassed a range of experimental applied and industrial research fields The emergence of technical acoustics and electroacoustics illustrates a scientific field at the intersection of science and technology Wittje starts with Helmholtz's and Rayleigh's work and its intersection with telegraphy and early wireless and continues with the industrialization of acoustics during World War I when sound measurement was automated and electrical engineering and radio took over the concept of noise Researchers no longer appealed to the musically trained ear to understand sound but to the thinking and practices of electrical engineering Finally Wittje covers the demilitarization of acoustics during the Weimar Republic and its remilitarization at the beginning of the Third Reich He shows how technical acoustics fit well with the Nazi dismissal of pure science representing everything that German Physics under National Socialism should be experimental applied and relevant to the military

The Sounds of Early Cinema Richard Abel, Rick R. Altman, 2001-10-03 The Sounds of Early Cinema is devoted exclusively to a little known yet absolutely crucial phenomenon the ubiquitous presence of sound in early cinema Silent cinema may rarely have been silent but the sheer diversity of sound's and sound image relations characterizing the first 20 years of moving picture exhibition can still astonish us Whether instrumental vocal or mechanical sound ranged from the improvised to the pre arranged as in scripts scores and cue sheets The practice of mixing sounds with images differed widely depending on the venue the nickelodeon in Chicago versus the

Bonnet, 2019-01-15 This study of the subtlety complexity and variety of modes of hearing maps out a sonorous archipelago a heterogeneous set of shifting sonic territories shaped by the vicissitudes of desire and discourse Profoundly intimate yet immediately giving onto distant spaces both an organ of fear and an echo chamber of anticipated pleasures an uncontrollable flow subject to unconscious selection and augmentation the subtlety complexity and variety of modes of hearing has meant that sound has rarely received the same philosophical attention as the visual In *The Order of Sounds* Fran ois J Bonnet makes a compelling case for the irreducible heterogeneity of sound navigating between the physical models constructed by psychophysics and refined through recording technologies and the synthetic production of what is heard From primitive vigilance and sonic mythologies to digital sampling and sound installations he examines the ways in which we make sound speak to us in an analysis of listening as a plurivocal phenomenon drawing on Foucault Deleuze and Guattari Barthes Nancy Adorno and de Certeau and experimental pioneers such as Tesla Bell and Raudive Stringent critiques of the soundscape and reduced listening demonstrate that univocal ontologies of sound are always partial and politicized for listening is always a selective fetishism a hallucination of sound filtered by desire and convention territorialized by discourse and its authorities Bonnet proposes neither a disciplined listening that targets sound itself nor an ocean of sound in which we might lose ourselves but instead maps out a sonorous archipelago a heterogeneous set of shifting sonic territories shaped and aggregated by the vicissitudes of desire and discourse **Sounding New Media** Frances Dyson, 2009-09-04 *Sounding New Media* examines the long neglected role of sound and audio in the development of new media theory and practice including new technologies and performance art events with particular emphasis on sound embodiment art and technological interactions Frances Dyson takes an historical approach focusing on technologies that became available in the mid twentieth century electronics imaging and digital and computer processing and analyzing the work of such artists as John Cage Edgard Var se Antonin Artaud and Char Davies She utilizes sound s intangibility to study ideas about embodiment or its lack in art and technology as well as fears about technology and the so called post human Dyson argues that the concept of immersion has become a path leading away from aesthetic questions about meaning and toward questions about embodiment and the physical The result is an insightful journey through the new technologies derived from electronics imaging and digital and computer processing toward the creation of an aesthetic and philosophical
